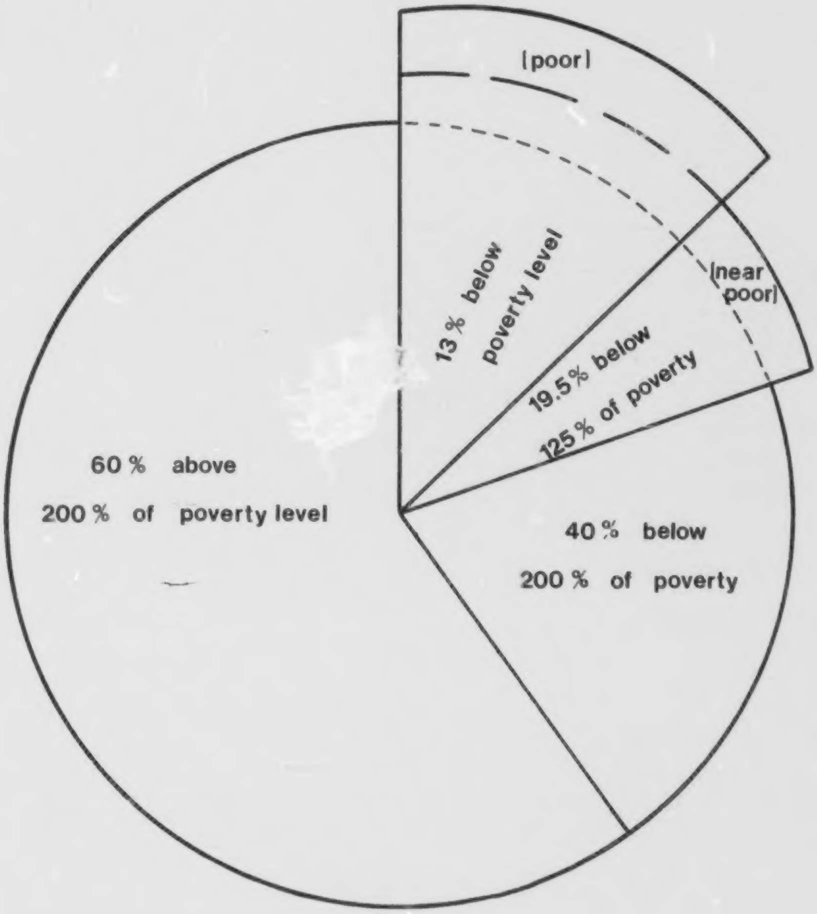
# Poverty in Maine, 1970-1980

## Volume 1: Causes and Conditions



Executive Department
March 1985

Maine State Planning Office and
Division of Community Services

This report was prepared by the Maine State Planning Office with funding provided by the Division of Community Services.

The principal author of this report was Joyce Benson, Senior Planner, State Planning Office. Additional writing assistance by Charles S. Colgan, Director of the Policy Division, State Planning Office, and Lucy Martin of Hallowell. Graphs were prepared by Roy Lynn Howe of Kingfield. Design and layout by Richard D. Kelly, State Planning Office. Typing by Barbara Macomber, State Planning Office.

# Poverty in Maine, 1970 - 1980

## Volume 1: Causes and Conditions

MAINE STATE PLANNING OFFICE
Richard E. Barringer, Director

MAINE DIVISION OF COMMUNITY SERVICES
Nancy Boothby, Director

March 1985

**Poverty in Maine, 1970-1980** is one of four volumes examining poverty in Maine prepared by the State Planning Office. The second volume is a statistical abstract of 1980 census data and other data concerning the conditions of poverty. This volume is similar in format to the "Profile of Poverty" first published in 1973. Those interested in Volume 2 should inquire with the Division of Community Services or the State Planning Office.

Volumes 3 and 4 contain statistics from the 1980 Census on social and economic conditions and housing on a community and regional basis to assist planning and program development by local and regional agencies. Those interested in examining the data contained in these volumes should contact their local Community Action Agency or Regional Planning Commission. Copies are also available at major libraries throughout the State.

# Preface

Simply defined, poverty is a condition characterized by insufficient income to meet the minimum daily needs of life.

Anyone can be poor. People with income below the poverty level may be highly educated or they may be uneducated. They may live alone or in families. They include the young, the middle-aged and the elderly. They are the people with jobs, and people without jobs.

Certain groups of people in our society, however, are more likely to be poor. There are certain social and economic conditions and circumstances that cause the poverty rate to rise or fall, and that make the likelihood of falling below the poverty line greater for some than for others.

This study examines those factors and their effect on the lives of Maine people based on the 1980 Census, the only data source that permits detailed study of those living in or near poverty. It also considers how the population and the economy have changed in recent years, and the effects of these changes for the remainder of the 1980's.

# I

# Summary

Since poverty became a major political issue in America during the 1960's, finding appropriate ways to assist the needy has been an important topic on the public agenda. But during the same period, the nature and extent of poverty in America and in Maine has changed in several significant ways.

This report examines the principal social and economic characteristics of poverty in Maine, the changes that occurred in the 1970's, and describes how many of the trends of the 1970's continued into the early years of this decade. The report is based largely on data from the 1980 Census, the only source that provides sufficient detail to conduct an in-depth analysis of our population.

It is intended to provide new insights into the condition of the poor in Maine, in order that a renewed commitment to effective action to assist the poor may be made.

The poverty rate in 1980—the percentage of people in Maine living below the official "poverty line"—was thirteen percent, the same as in 1970. However, this stability masks the fact that there were 10,000 more poor people in 1980. The U.S. pattern for the same period was similar. The reason that the rate remained unchanged, while the number of poor grew, is that Maine's population growth during the 1970's was faster than its economic growth.

The official measure of poverty is the "poverty line", a figure calculated annually by the Federal Office of Management and Budget to measure the level of income below which a family of a given size cannot purchase the minimum necessities. The "poverty line" is a useful measure for government statistics; but it is an artificial measure of a complex reality.

Poverty is more than just a matter of having income below the official poverty line. The near poor—those with incomes up to twenty-five percent more than the poverty line income—face difficulties that are often as great as those officially in poverty.

These low income groups face significant challenges in maintaining adequate hosuing, staying healthy, and even in helping their children to take full advantage of the education system. Various forms of public assistance make poverty more bearable, but also induce feelings of dependence on others which make it difficult for some to break out of poverty.

There is a great deal of evidence that many people move in and out of the categories of "poor" and "near poor" during their lives, or even during a single year. For example, the monthly average unemployment rate in Maine during 1979 was ten percent. But, nearly twenty percent of all Maine workers experienced some period of unemployment during that year. The Department of Human Services reports that, each month, about 50,000 Maine residents receive Aid to Families with Dependent Children (AFDC); but that three times that number are actually served during a twelve month period.

Thus, the problems of the poor must really be considered to be the problems of the poor and the near poor, of people with low income in general. And, rather than looking at a fixed percentage of the Maine population as being poor, the problems should be seen as economic and social conditions that make earning adequate incomes difficult.

The Maine economy has grown substantially in the last 10 years, outpacing the national economy and permitting Maine to enjoy unemployment rates consistently below the national average over the past 6 years. But the growth in the Maine economy has not provided sufficient high paying jobs to permit substantial reductions in poverty.

There are two principal reasons for this. First, Maine continues to rely heavily on its natural resource based industries—farming, forestry, and fishing—which often provide only seasonal work, and whose incomes depend on sometimes erratic prices for products. Second, most of the growth in the Maine economy has been in the trade and services industries, which also tend to pay lower wages, and offer a great number of part-time and part-year jobs.

As a result, the "working poor" are a significant part of the poverty in Maine. In fact, the increase in the number of poor in Maine between 1970 and 1980 was entirely among working-age adults between the ages of 18 and 44. The growth in poverty among adults was fifty percent faster than the increase in the Maine adult population as a whole.

More than one-half of the low income families in Maine have one or more members in the workforce, but they tend to fill the part-time or part-year jobs that are subject to periods of unemployment and seasonal layoffs.

A related factor is the significant growth in the single-person and single-parent household. Although most families in Maine still have two parents, and in fact more than two-thirds of the families in poverty have two parents, the number of single-parent families has tripled and the number of single-person households increased by more than sixty-five percent.

Single persons and single-parent households have obvious disadvantages in an economy with a large number of relatively low-wage and part-time or part-year jobs. These disadvantages are illustrated by the fact that the average income of two-earner households was $6,000 greater than the income of one-earner households in 1979.

Poverty is increasingly affecting women in particular. The majority of single-person and single-parent families with children are headed by women. Women tend to have lower wages than men in most sectors, and tend to hold a high proportion of low-wage jobs in both manufacturing and non-manufacturing.

While poverty among working-age adults, has increased, the poverty rate for the elderly declined during the 1970's. Major changes in the Social Security and Medicare programs, combined with the longer Social Security payment histories of recent retirees, were instrumental in reducing poverty among the elderly.

The number of children in poverty in 1980 was largely unchanged from 1970. This was primarily due to demographic factors: while the number of families with low incomes grew during the 1970's, these families had fewer children.

Within Maine, significant regional differences in the amount and extent of poverty have emerged. The level of poverty in a region varies with the health of the regional economy, particularly the availability of full-time, high-income employment opportunities. By this measure, the more rural areas of Maine have the highest rates of poverty. In 1980, Waldo and Washington Counties had rates over twenty percent, while York and Cumberland Counties had rates under ten percent.

Many of the changes that occurred in the 1970's are continuing in the 1980's. The growth in single-person households and single-parent families is likely to continue, though perhaps at somewhat slower rates than in the 1970's. The trade and service industries, those with a significant number of part-time and part-year jobs, are forecast to provide most of the new jobs throughout the 1980's.

There is no doubt that public programs designed to assist the poor have been effective in ameliorating the conditions in which many of the poor live. The changes in the poverty rate among the elderly are the best evidence of this.

The challenge for public policy towards poverty in the 1980's is to avoid making already hard lives more difficult while, at the same time, finding ways to move people out of poverty permanently. This means creating additional employment opportunities, particularly full-time, year-round opportunities.

# II

# Introduction

In the 1960's and 1970's, a variety of public policies and programs were designed to provide services to the nation's poor. These programs were designed to reduce suffering and assure that basic needs are met, and they have been largely successful in achieving these goals.

However, most social programs were not designed to help people move out of poverty. Thus, in spite of expanded income maintenance and social service programs, poverty persists in Maine and in the nation. **In fact, the number of people living below the "poverty" line has increased. During the 1970's, the number of poor grew by 10,000 persons in Maine.** Nationally, the number increased by more than 2 million and continues to rise. In Maine, thirteen percent of the population is "officially" poor, and another twenty-five percent live on the borderline of poverty.

It is time to look in greater depth at the causes of poverty and to formulate new strategies to reduce it. This report marks the beginning of that process. It examines the underlying causes of poverty in Maine and identifies trends in the social, demographic, and economic structure which determine the nature and extent of poverty in this decade.

## POVERTY—DEFINITION AND MEASUREMENT

Poverty is generally a measure of economic subsistence. It is commonly defined in terms of the amount of income necessary for a household of a given size to attain a minimum standard of living.

But poverty is more than lack of income sufficient to afford the amenities enjoyed by middle income households, or the luxuries enjoyed by those in the upper income bracket. It is lack of opportunity, of self-sufficiency, of self-determination. It is also an inability to afford decent housing, adequate diet, or health care. Poverty even makes a proper education more difficult.

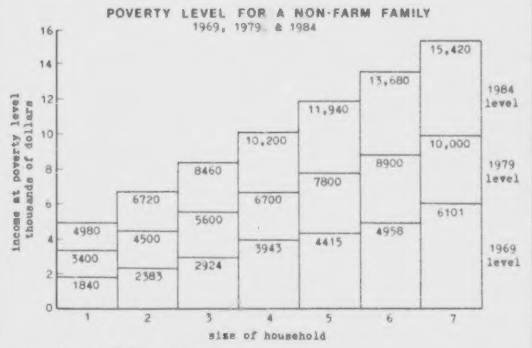
Together, these unmet needs produce feelings of psychological dependence, feelings of powerlessness and hopelessness that are often passed on to the next generation. Being poor comes to be perceived by the general public and by the poor themselves as a weakness or personal failing, rather than as a result of social and economic conditions that foster inequalities and perpetuate them.

The poor are sometimes described as members of an "underclass" or "subculture" of chronically deprived people whose lifestyles, values, social behavior and cultural norms are distinctly different from the rest of society. While there are poor in Maine who may fit this description, it is not an accurate characterization of the vast majority of Maine poor.

The "poor" include a large number of people whose circumstances vary over time so that their incomes sometimes place them below the poverty line and sometimes just above. As family situations and employment opportunities change, people can move in and out of poverty, as statistically measured, and yet see little real change in their living conditions.

Two statistics are commonly used to measure the extent of poverty. The official measure of poverty is established by the U.S. Office of Management and Budget and is adjusted each year to reflect changes in the cost of living. This measure is used by the Census Bureau in reporting the poverty rate.

**FIGURE 1**



Source: US Office of Management and Budget

A second indicator of economic well-being is the cost of living budget, in which the amount of money a family requires to attain a lower, intermediate, or upper level of living is determined by the U.S. Labor Department. The amount of income required at the lower level is about twice the income level established as the official poverty guideline.

To illustrate how these measures compare to the incomes of Maine people, a person earning minimum wage ($2.90 per hour in 1979) and who worked full-time all year received a gross income of $6,032, only 80% of the 1979 poverty level of $6,700 (adjusted, after tax) for a family of four[1]. In 1984, the poverty level for a family of four is $10,200, equivalent to the gross wage from a full-time job at $4.90 per hour. A person working full-time in 1984 at the minimum wage ($3.35 per hour) has an income that is only two-thirds (67%) of the poverty level for a family of four.

**FIGURE 2**

**Comparison of Federal Measures of Poverty to Earnings of Maine Workers, 1979 and 1984**

| | Poverty Level | Lower Living* Standard | Minimum Wage | Average Earnings In Maine |
|---|---|---|---|---|
| Annual Income Required | | | | |
| 1979 | $ 6,700 | $13,623 | $6,032 | $ 9,435 |
| 1984 | 10,200 | 16,790 | 6,968 | 14,130** |
| Hourly Wage Required | | | | |
| 1979 | $3.22 | $6.55 | $2.90 | $4.54 |
| 1984 | 4.90 | 8.07 | 3.35 | 6.79** |
| Percent of Maine Individuals With Income Below: | | | | |
| 1979 | 51% | 81% | 51% | —— |
| Percent of Maine Households With Total Income Below: | | | | |
| 1979 | 13% | 40% | 15% | —— |

*Data for Family of Four

**Bureau of Labor Statistics, 1983 Preliminary Estimates

In order to attain the 1979 lower level standard of living established by the Department of Labor, one must have had a full-time job paying $6.55 per hour. That year, forty percent of the population in Maine lived in households where the total income of all members amounted to average wages of $6.55 per hour or less. **In 1984 a person must earn more than $8.00 an hour to derive an income equal to the lower level standard of living. For 1983, the average hourly wage in Maine was $6.79[2].**

Although we must rely on statistics to describe poverty, the statistics are, at best, a partial measure of what it means to be poor. Poverty has severe human costs for which inadequate measures exist today.

## THE EXTENT OF POVERTY IN MAINE

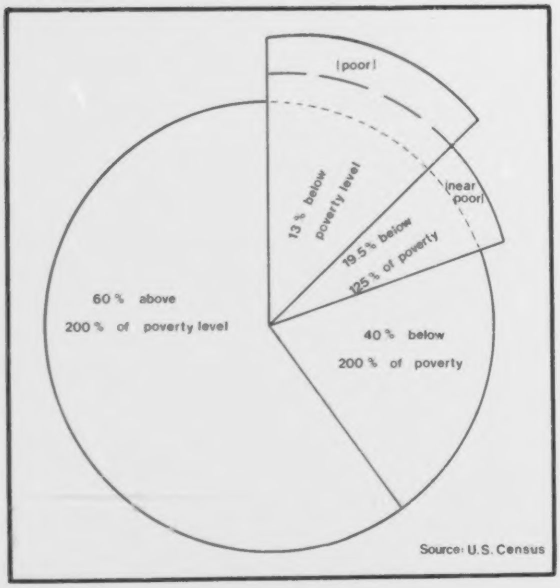
The full extent of poverty in Maine is difficult to measure. The poverty rate indicates the proportion of the population living below the poverty line at a given time. In 1979, thirteen percent of the Maine population, or 141,000 people, were living below the official poverty line. Almost one in five were on the borderline (below 125% of the poverty level), and 40% had income less than the amount required to meet the lower level standard of living as set by the U.S. Department of Labor.

---

[1] Most of this report is based on the 1980 Census. Economic statistics collected by the Census Bureau are for the 1979 calendar year. Where more current information is available, it has also been presented in order to provide comparison to the present.

[2] Bureau of Labor Statistics, April, 1984, Data for 1983.

**FIGURE 3**



Source: U.S. Census

In reality, however, people move in and out of poverty as their own circumstances and economic conditions change. A large number of Maine people have income near the poverty level and may be considered to be "at risk" of being poor.

**There are signs that poverty is more extensive than many commonly-used indicators suggest.** Twice as many people suffer periods of unemployment than is indicated by the monthly average umemployment rates, with which most people are familiar. In fact, nearly one worker in five was unemployed some time in 1979, while the State's average unemployment rate for the year was less than 10%.

Likewise, the number of people receiving benefits from the Aid to Families with Dependent Children (AFDC) program averages 50,000 a month, but it is estimated that during a 12 month period, at least three times that many are served.

Thus, "poverty" is a long term condition for some people, and a temporary state for others. **For many, however, living "near poverty" is a permanent situation.**

There are also indications that poverty has increased since the 1980 Census was compiled. A recent Census Bureau Report[1] estimates that the poverty rate in the U.S. increased from twelve percent to fifteen percent between 1979 and 1983.

Though detailed State figures are not yet available, the report attributes the rise in poverty to a recessionary economy and to slow job growth. This underscores a central fact about poverty: **limits to economic opportunities, coupled with social and demographic changes, have served to keep large segments of the population in or near poverty, and to narrow the prospects for diminishing poverty in the U.S. and in Maine.**

# III

# Social and Economic Characteristics of Poverty in Maine

Who is poor in Maine? And why? Personal characteristics such as age, sex, race, and marital status, do not "cause" one to be poor, but there are definite relationships between these factors and the likelihood of a person being poor.

For example, the poverty rate among children is only slightly greater than that for the total state population. However, if a child lives in a single-parent household, the likelihood that he or she will be poor more than triples. If the single-parent is not working, the poverty rate climbs even higher.

This section discusses the relationships between poverty and several key characteristics: age, sex, household size and type, education, health, housing and employment conditions.

## A. DEMOGRAPHIC AND SOCIAL CHARACTERISTICS AFFECTING POVERTY

### 1. AGE DISTRIBUTION

Historically, the poor have been disproportionately very young or very old. But during the 1970's, **the increase in the number of poor has been entirely among the non-elderly adult population.** Poverty increased most rapidly among adults under age 45, an increase of more than fifty percent. Single adults age 18 to 44 were affected most; the number living in poverty more than doubled (up 112%).

**FIGURE 4**

**Distribution of Poverty and Variation in Poverty Rate by Age**

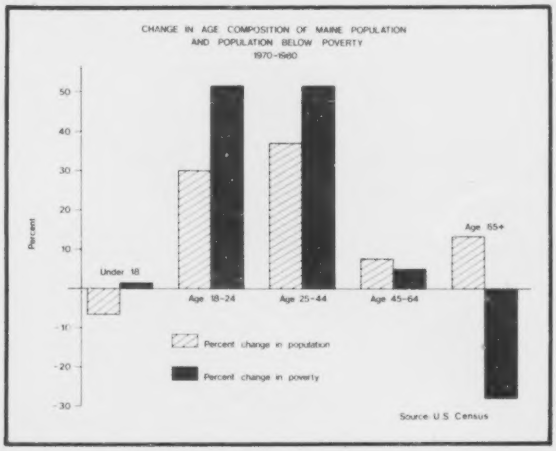
| Age | Number Below Poverty | Percent of the Poor | Poverty Rate of Each Age Group |
|---|---|---|---|
| Under 18 | 49,862 | 35.4 | 15.8% |
| 18 - 24 | 20,295 | 14.4 | 16.4 |
| 25 - 44 | 29,985 | 21.3 | 10.0 |
| 45 - 64 | 19,301 | 13.7 | 8.9 |
| 65 and Over | 21,533 | 15.3 | 16.4 |
| TOTAL | 140,996 | 100.0 | 13.0 |

Source: 1980 Census

Thirty-five percent of the poor are children. **Even though the total number of children in Maine has declined, the number living below poverty has remained constant.** The major reason is the threefold increase in single-parent households since 1970. Half of all poor children live in households headed by single females.

In contrast, **the number of elderly who are poor has declined.** The elderly accounted for fifteen percent of the poor in 1980 compared to twenty-three percent in 1970. Major public policy changes in the 1970's helped to reduce poverty among the elderly. Indexing of Social Security income is the largest single factor responsible for this reduction. In addition, recent retirees have a longer history of payment into the Social Security program and are therefore entitled to more benefits than those who retired prior to 1970. Expanded health and transportation services and programs to hire older people (such as the Senior Service Corps) have increased work opportunities for the elderly as well.

**FIGURE 5**



CHANGE IN AGE COMPOSITION OF MAINE POPULATION AND POPULATION BELOW POVERTY 1970-1980

Source U.S. Census

### 2. SEX DISTRIBUTION

**An increasing portion of Maine's poor are women.** The poverty rate is greater among women at all ages. Females account for fifty-eight percent of the poor but only fifty-two percent of the total population.

Women in at-risk groups (the elderly, single women, and single female parents) are a growing share of the population. Most of the elderly living below poverty are women. This is because women have a longer life expectancy than men, and make up an increasing share of the elderly population; and because women generally receive less retirement income. In addition, the number of women who are family heads, and the number of women who choose to form families later in life, are increasing.

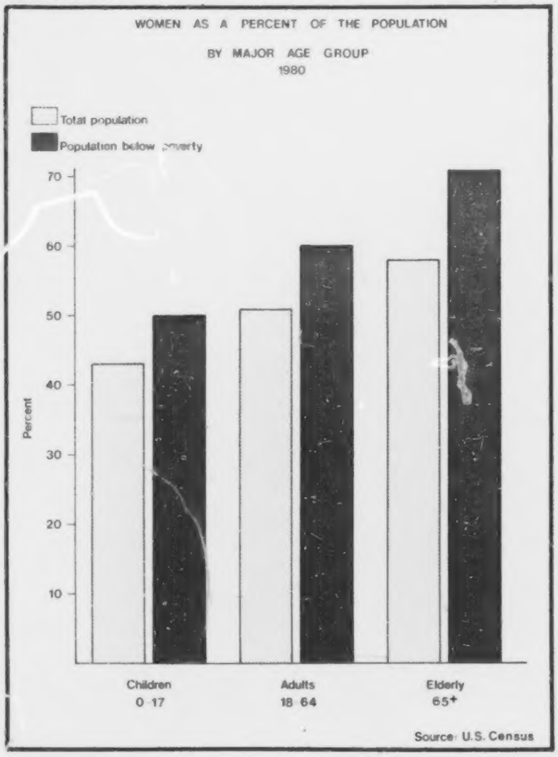
**FIGURE 6**

**Women as a Percent of the Population in 1980**

| Age | Percent of Total Population | Percent of Population Below Poverty |
|---|---|---|
| Under 18 | 43% | 50% |
| 18 - 59 | 51 | 60 |
| 60 + | 58 | 71 |

Source: 1980 Census Public Use Sample

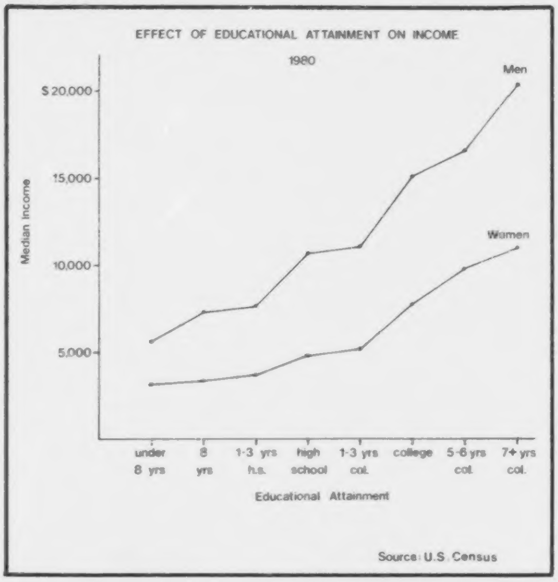
**FIGURE 7**



Source: U.S. Census

Moreover, working women have substantially lower incomes than men. On the average, in 1979, women received only 47.4 cents for every dollar of income received by men. **The earnings of women age 18 and over working full-time are only fifty-five percent of the earnings of men who work full-time. The gap widens as educational attainment increases.**

**FIGURE 8**

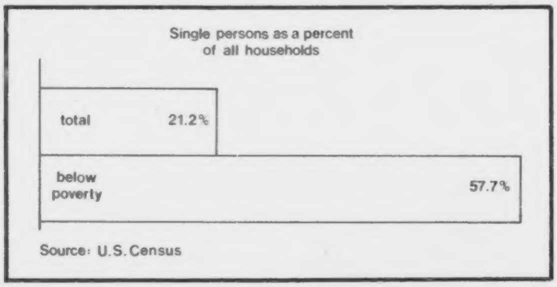


Source: U.S. Census

## 3. HOUSEHOLD SIZE AND TYPE: Unrelated Individuals

**Single individuals[1] suffer the highest rates of poverty;** and the number of single-person households is increasing at a much faster rate than the population living in family units. Among the poor, they account for twenty-eight percent of the people, and more than half of the households (39,000 out of 68,000), living in poverty.

**FIGURE 9**



Source: U.S. Census

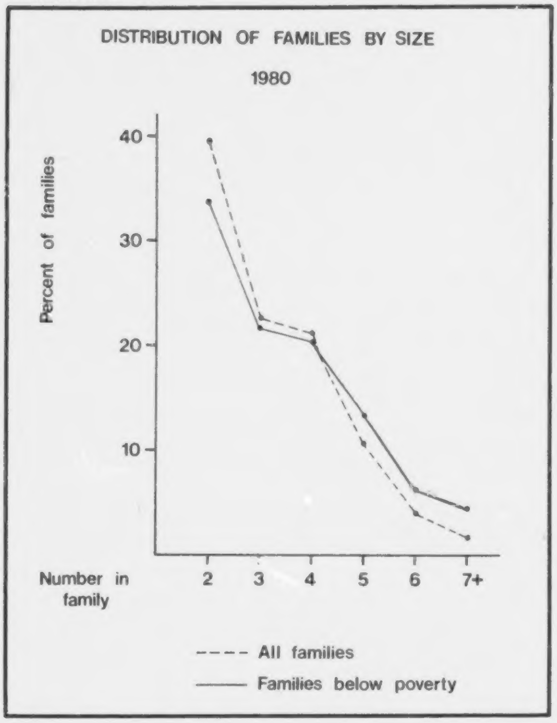
---

[1] "Single" and "unrelated individual" are terms used by the Census Bureau to refer to people who either live alone or who share housing with others to whom they are not related (boarders, roommates, etc.).

## 4. HOUSEHOLD SIZE AND TYPE: Families

Large families have traditionally been more prone towards poverty than small families. The poverty rate tends to increase with family size, but there are relatively few very large families today. Large families no longer contribute significantly to the overall poverty rate.

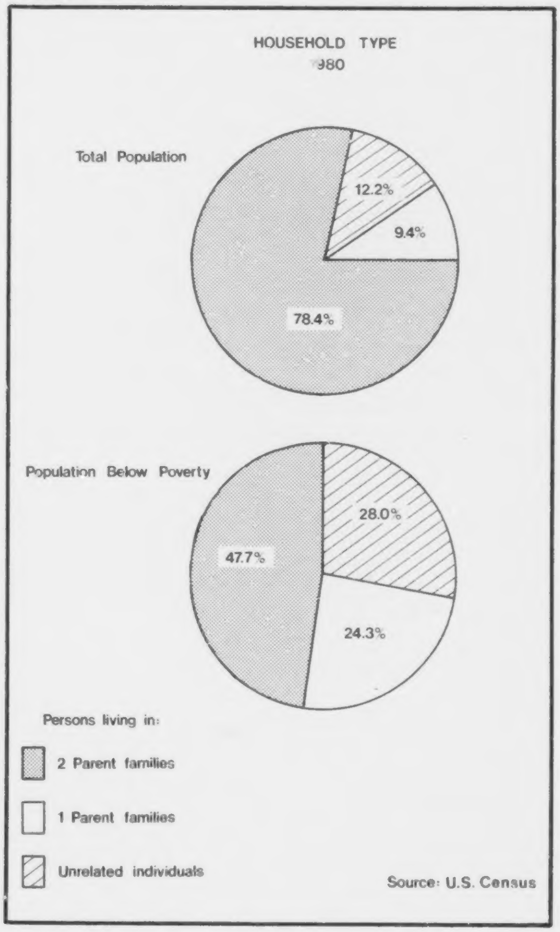
**FIGURE 10**



Rather, since 1970, **the number of families headed by a single-parent has tripled;** and while they still form a relatively small share of the families (only twelve percent) and of the total population (nine percent), **single-parent families account for one-third of all poor families. The poverty rate among families headed by a single female parent is five times as great as for two-parent families.**

Despite the significant growth in single parent households, **nuclear families still make up eighty-five percent of all Maine families and eighty-two percent nationwide. Two-thirds of the families living in poverty are headed by married couples.** These families often have only one member in the labor force, usually employed in a low wage job, or they are headed by an elderly or disabled person. The number of two-parent poor families has remained virtually unchanged since 1970.

**FIGURE 11**



Source: U.S. Census

## 5. EDUCATIONAL ATTAINMENT

**Low educational attainment diminishes income and employment opportunities. In Maine, people without a high school diploma are twice as likely to be poor.** More than one-fifth (twenty-one percent) of the non-elderly family householders[1] below poverty have an eighth grade education or less, and only fifty-six percent are high school graduates. In contrast, more than three fourths of the non-elderly householders above poverty are high school graduates, and only twelve percent have not attended high school.

People with relatively little education have more limited opportunities for full-time work. While less than a third of the population does not have a high school diploma, sixty-five percent of men and fifty-eight percent of women are employed in jobs that are less than full time (i.e., less than 9 months of the year or less than 35 hours a week).

**Educational differences between the poor and the non-poor begin at an early age.** Even the very young children of poor families are less likely to be in school. Fewer children from low income homes are enrolled in nursery school and kindergarten programs. The Head Start program, which was created to help low income children enter the educational system, has had remarkable success, but today it has funds sufficient to assist only twenty-five percent of the eligible children in Maine[2]. The high school drop-out rate among poor youth in 1980 was more than double the rate among non-poor youth (8.3% compared to 3.9%).

The reasons for the poor's lower participation in education have not been fully documented or explained. A number of studies have shown higher levels of absenteeism among the poor because of inadequate clothing, lack of transportation, and insufficient finances to participate in school events. As a result, the poor have difficulty utilizing the education system fully, which reflects in performance and drop-out rates.

**FIGURE 12**

**Educational Attainment and Poverty Status of Family Householders Under Age 65**

| Education Level | Total Householders Under Age 65 | | Below Poverty | | Above Poverty | |
|---|---|---|---|---|---|---|
| | Number | % | Number | % | Number | % |
| 8 Years or Less | 31,170 | 12.5% | 5,310 | 21.0% | 25,860 | 11.6% |
| 1-3 Years High School | 34,488 | 13.8 | 5,742 | 22.8 | 28,764 | 12.8 |
| Completed High School | 104,004 | 41.8 | 10,098 | 40.1 | 93,906 | 41.9 |
| 1 or More Yrs. College | 79,402 | 31.9 | 4,055 | 16.1 | 75,347 | 33.7 |
| TOTAL | 249,064 | 100.0 | 25,205 | 100.0 | 223,859 | 100.0 |
| Percent Completed High School | 73.7% | | 56.2% | | 75.6% | |

Source: 1980 Census

---

[1] The term "householder" refers to the person in each household whose name appears first on the census questionnaire and is, in most cases, the person (or one of the persons) in whose name the home is owned or rented. The term replaces "Head of Household". The Census Bureau distinguishes between family householders and non-family householders. The former contain two or more members related by marriage, blood or adoption. Non-family households contain a single person or, if more than one person is present, roommates, boarders, etc.

[2] The Third Special Session of the 111th Legislature approved $1.7 million of additional funding, raising the percent of children served by the Head Start program from less than twenty percent to twenty-five percent in the 1984-1985 school year.

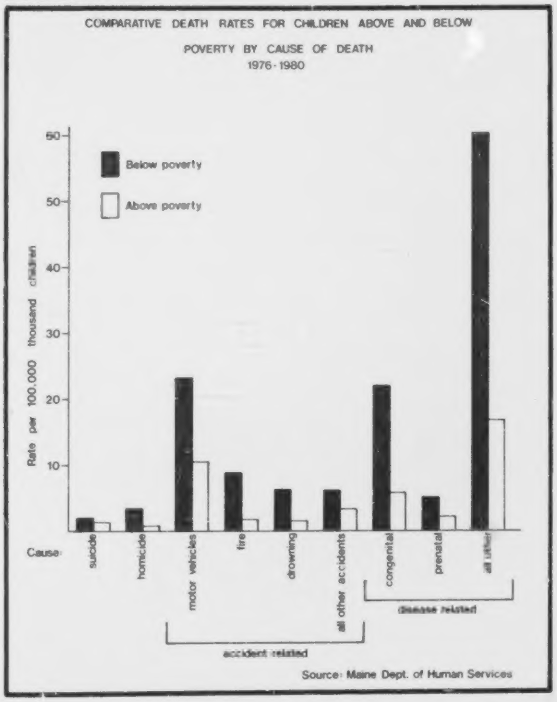
There are also studies that indicate the poor place a lower value on education and have lower aspirations. Studies by the Department of Education and Cultural Services[1] have repeatedly found that children from low income families do not expect or plan to further their education. They do not perceive themselves as having a future markedly different from that of their parents. Other studies point to financial need of the family or individual, teen pregnancy, and other events that interrupt the formal education process.

## 6. HEALTH

**Poor health limits one's capacity to earn an adequate living and results in high medical expenses that further deplete income. Disabled or handicapped persons are twice as likely to be poor.**

Performance in school and in the work place has been associated with diet and health care, both of which were often inadequate during the childhood of many of today's low income adults. Moreover, today Maine children in low income environments are three times more likely to die of disease or accident than children who are better off[2].

**FIGURE 13**



COMPARATIVE DEATH RATES FOR CHILDREN ABOVE AND BELOW POVERTY BY CAUSE OF DEATH
1976-1980

Source: Maine Dept. of Human Services

Without proper diet, shelter, or health care, children are more likely to suffer the long term effects of poor health, disease, disability, and hazardous living conditions, and are more likely to die from the effects of poverty. **The cumulative effect is that a child growing up in poverty will have a higher probability of inheriting a life of poverty.**

During the 1970's, Food Stamps, Medicare, Medicaid, catastrophic illness and medical needy programs were established to serve disadvantaged people and the programs now in place can be expected to improve the future for many of today's low income children. These measures have reduced the cost of care to thousands of low income people. Since the construction of rural health care facilities, the number of unserved or inadequately served people has been reduced.

However, not all children (especially those in two-parent families and the children of the "working poor") receive these benefits. Needs also remain unmet among adults, especially the working poor and those in certain rural areas where cost and distance are still prohibitive. Availability and accessibility of care is reflected in the state's vital statistics. For example, in Waldo County, 6.6% of deaths occurred en route to the hospital in 1980, nearly three times the State average.

## 7. HOUSING

Housing conditions have improved markedly in Maine since 1970. The number of units lacking complete plumbing has been cut by half. The proportion of the State's housing stock built before 1930 dropped from two-thirds to one-half of the total stock. In urban areas, multi-family developments and rent subsidy programs have reduced the number of overcrowded units by half, although rural areas continue to have higher rates of overcrowded housing. Yet, in spite of the nearly 100,000 new units built during the decade, Maine has the greatest proportion of older housing stock in the country, indicating a greater need for repair, rehabilitation and weatherization assistance.

---

[1] Maine Department of Educational and Cultural Services, Maine Assessment of Basic Skills, 1978: Technical Report

[2] Maine Department of Human Services, **Childrens' Death in Maine,** 1976-80 Final Report, April, 1983

**As has been the case historically, the poor live in the State's worst housing units. They are three times more likely to be renters than home owners** and are more likely to live in overcrowded conditions. Nearly twice as many poor live in mobile homes and multi-family housing. Twelve percent of the poor (mostly in rural areas) live in homes lacking complete bathroom facilities.

Affordability of housing is a growing concern which has become a major issue as inflation and interest rates have skyrocketed. These changes have placed adequate housing out of reach of much of the population in the lower income brackets, especially young families planning for their first home.

Only a small proportion of Maine's families can afford to rent or buy a home today without the assistance of rent or interest subsidy programs. These programs served as a buffer to the rising cost of housing during the 1970's, allowing substantial numbers of Maine households to improve their living conditions.

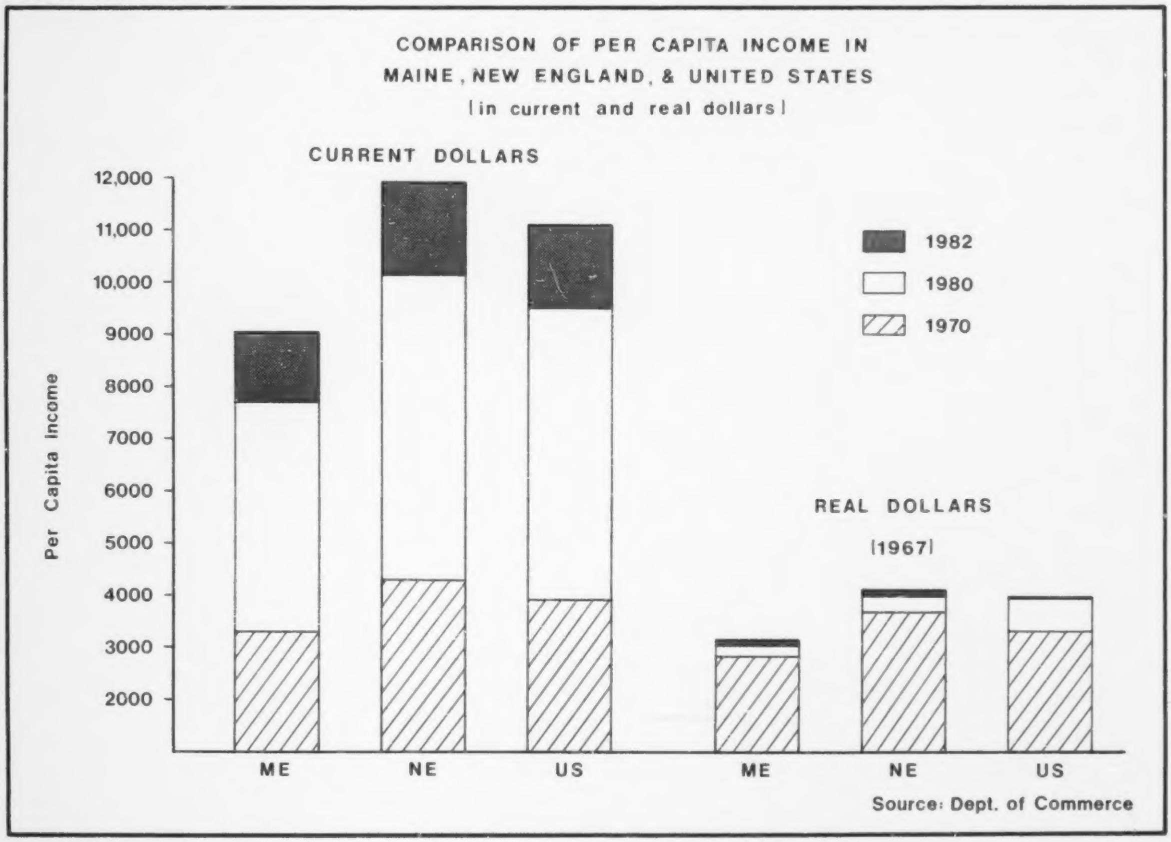
Federal housing assistance programs have been cut by two thirds in recent years, and as a result of these cuts and rising interest rates, new home construction in Maine has dropped significantly. In the 1970's, an average of 9,000 units per year were built. This has declined to only 3,000 to 5,000 units per year today[1].

## B. ECONOMIC FACTORS AFFECTING MAINE'S POVERTY RATE

### 1. LOWER OVERALL INCOME

The income of Maine households has averaged 80% of the national level for some time. Today, Maine ranks 40th among the states in family income.

**FIGURE 14**



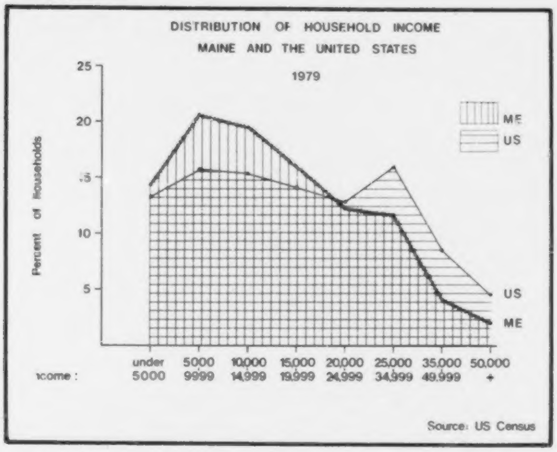
Source: Dept. of Commerce

---

[1] Maine State Housing Authority, **Maine Housing Trends, 1950-1980,** 1984

**Although Maine's poverty rate is not significantly greater than the national rate, a greater proportion of the State's population has income near the poverty level, and very few Maine people have substantial income.** Only three percent have incomes of $50,000 or more.

## FIGURE 15



Source: US Census

Sudden and severe economic changes like those in the mid-western states, have not shaken Maine. The economy has remained stable, and new industries have prospered. At the same time, generally lower wages and the higher proportion of low skill and seasonal jobs depress the income and living standard of many Maine adults. Thus, while Maine has fewer extreme cases of poverty, it harbors a greater number of borderline poor.

## FIGURE 16

**Comparison of the Extent of Poverty in Maine and the U.S.
1979**

| 1980 POPULATION: | MAINE | U.S. |
|---|---|---|
| Severely Poor (Below 75% Poverty) | 7.6% | 8.3% |
| "Officially" Poor (Below 100% Poverty) | 13.0 | 12.4 |
| Borderline (Below 125% Poverty) | 19.0 | 17.2 |
| At Risk (Below 150% Poverty) | 25.9 | 21.7 |
| At Risk (Below 200% Poverty) | 40.1 | 31.8 |
| Moderate Income (Above 200% Poverty) | 59.9 | 68.2 |

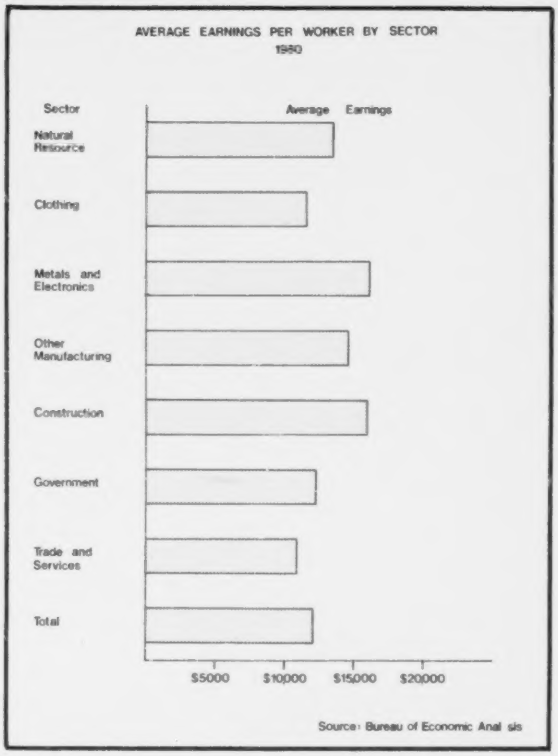
## FIGURE 17



Source: Bureau of Economic Anal sis

Most people in Maine today—as well as the nation—rely on more than one source of income for their livelihood—savings, small investments, and, especially, multiple jobs. Most farm people derive a portion of their family income from off-farm work. Many of the elderly, as well as many public assistance recipients, work part time. **Earnings provide half the income of poor families and one-third the income of single persons below poverty.** Most of the households receiving AFDC have members who work or will enter the labor force as soon as their children reach school age.

## FIGURE 18

**Proportion of Income by Source for Families and Unrelated Individuals Above and Below Poverty in 1979**

| Percent of Income From: | Families Above Poverty | Families Below Poverty | Unrelated Individuals Above Poverty | Unrelated Individuals Below Poverty |
|---|---|---|---|---|
| Earnings | 83.2% | 53.2% | 69.1% | 33.4% |
| Wage and Salary | 75.2 | 49.5 | 64.1 | 31.7 |

## 2. LOW-WAGE JOBS

**The poor are concentrated in low-wage, low-skill jobs.** Of the approximately 12,500 working household heads below poverty, a quarter are unskilled laborers. Precision production jobs (primarily in the leather, textile, and clothing industries) and sales and clerical occupations account for an additional one-third of the jobs held by the poor. These tend to be the lowest paying industries in Maine.

Two-thirds of the female heads of households below poverty in the labor force are employed in sales, clerical and other service positions. One quarter are factory workers. In contrast, more than forty percent of the male household heads below poverty are employed in transportation or in farming, forestry, and fishing occupations.

## FIGURE 19

Source: U.S. Census

## 3. LABOR FORCE PARTICIPATION

Only half of the heads of poor families and one-third of the single-person households are in the labor force. Most of the poor are unable to work full time. The disabled, the old, and the young are not normally considered in determining labor force size, although a significant proportion work at least part-time. Nearly one-fifth (19%) of below-poverty adults under age 65 have a work disability.

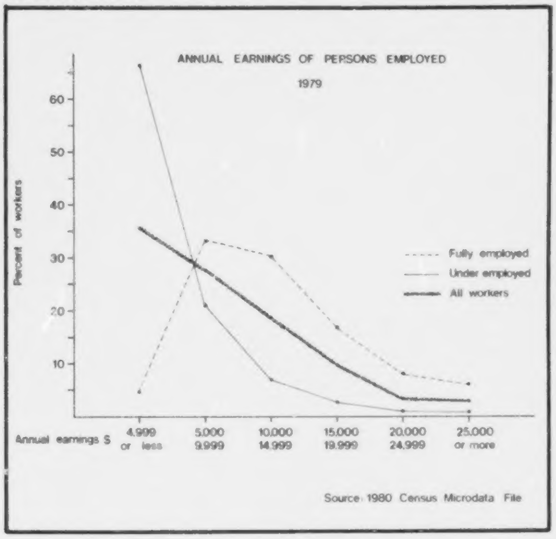
## 4. UNDEREMPLOYMENT AND UNEMPLOYMENT

**Half of the jobs in Maine do not offer full-time employment. This underemployment [1] is the primary reason for the low income of Maine people.** Ability to earn a sufficient income is restricted by the availability of largely part-time, temporary, or seasonal work. The poor are concentrated in these jobs.

While a segment of the population desires part-time and temporary jobs to supplement the income of a spouse or a retirement pension, far more are underemployed in that they desire more work but cannot find it. This is indicated by the number of people seeking work and the high turnover in people receiving benefits from public assistance programs.

**The difference in earnings between full and part-time workers is dramatic. Two-thirds of the people working less than full-time earned under $5,000 in 1979.** Eighty-eight percent had earnings of less than $10,000, while only thirty-eight percent of the fully employed earned less than $10,000 in 1979.

**FIGURE 21**



Source: 1980 Census Microdata File

The seasonality of the Maine economy accounts for nearly seventy-five percent of the people who do not work full-time. The total number of jobs available in Maine fluctuates from month to month by as many as 50,000. Although some seasonal variation in the labor force is normal, the range of fluctuation is not comparable to the demand for work.

**Of the poor who worked in 1979, only a quarter worked all year, while two-thirds of the population with moderate incomes worked all year.** Less than half of the heads of poor households worked a full year, compared to eighty percent of all heads of households.

Women, in particular, are more likely to work in part-time, temporary, or seasonal jobs. Thirty-five percent of all female heads of households did not work a full year, and among the poor, seventy-two percent of female family heads were not fully employed.

---

[1] Underemployed is defined as working less than 35 hours per week or less than 50 weeks a year.

The worker's age and level of education also affect underemployment. Young workers, age 18 to 25, account for thirty-nine percent of the underemployed, partly because they are new entrants to the job market and partly because many are students. A greater percentage of the underemployed, thirty percent, are not high school graduates, compared to twenty percent of the fully employed.

**Poverty is not directly linked to unemployment rates.** Those who experience short periods of unemployment may not suffer income losses great enough to place them below the poverty level. Unemployed persons in households containing second and third workers usually do not fall below the poverty line.

Nevertheless, unemployment does reduce income and the poor work at jobs which are prone to longer periods of unemployment. **Maine has a relatively low average unemployment rate. Yet, one worker in five may be unemployed at some point during the year.**

While Maine's economic growth has permitted lower unemployment than the nation as a whole, the structure of Maine's economy with its relatively high proportion of part-time or part-year jobs does not provide for enough opportunities for many people to earn sufficient income to escape poverty.

**Among the poor, nearly a quarter of the family heads were unemployed in 1979 and among these, seventeen percent were unemployed all year long.** Heads of households tend to have steadier employment than second and third earners. Only five percent of all household heads in the labor force in 1979 were unemployed. The average rate of unemployment for male and female headed households below poverty is the same, but more than forty percent of female family heads were unable to find any work at all.

**FIGURE 22**

**Unemployment Rate For Heads of Household By Poverty Status in 1979**

| | All Households | Households Below Poverty |
|---|---|---|
| A. Percent with Unemployment in 1979: | | |
| All Family Heads | 5.6% | 24.2% |
| Female Heads Only | 8.6% | 24.4% |
| Unrelated Individuals | 8.5% | 17.8% |
| B. Percent of Unemployed who had no work at all in 1979: | | |
| All Family Heads | 9.1% | 17.4% |
| Female Heads Only | 27.8% | 40.9% |
| Unrelated Individuals | 10.1% | 20.9% |

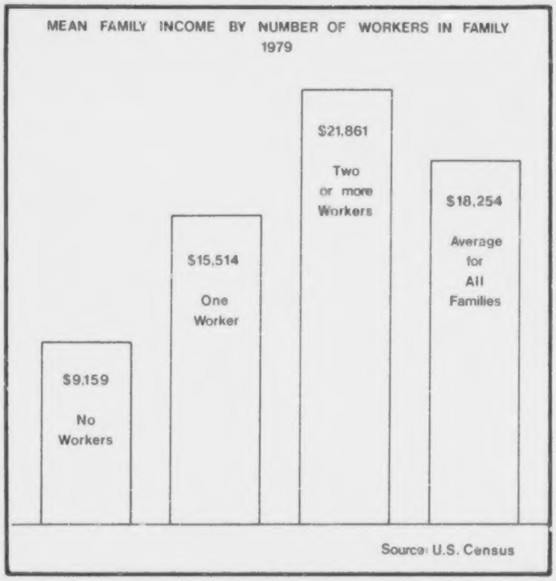
## 6. NUMBER OF WORKERS PER HOUSEHOLD

**The presence of more than one worker in the family is an important factor affecting a household's ability to avoid poverty.** This is true even when the second worker is employed in a lower-pay, part-time, lower-skill position than he or she is qualified for. The average income of families with two or more workers is more than $6,000 greater than that of families with only one worker, and is more than double (130% greater) the average income of families in which no member works.

**FIGURE 23**



Source: U.S. Census

**Second and third incomes in two-parent families substantially reduce the poverty rate in Maine.** Twenty-one percent of the families in which the husband works full-time are in the lower income bracket, and only eleven percent if the wife also works full-time.

However, low income households are less likely to have more than one member in the labor force. Among two-parent families living in poverty, about half of the householders work and less than a quarter of their spouses are employed. In contrast, eighty percent of the householders with moderate incomes and fifty-five percent of their spouses are working.

Unrelated individuals and single-parent families suffer much higher rates of poverty partly because there is, at best, only one worker present. The earning capacity of single-parent families is further limited when the single-parent is a mother who has focused primarily on childrearing rather than career development, and is forced to accept temporary or part-time work. Less than half of the female heads in the labor force are employed full-time. Even a good educational background often does not fully compensate for years of limited or no job experience.

**In spite of such limitations, seventy-five percent of single mothers are in the labor force;** two-thirds of these have children under age 6. In addition, older children frequently work (for example, as babysitters, seasonal farm laborers and sales clerks), thereby significantly reducing the poverty rate among single-parent families. Overall, more than a third of Maine youth age 16-17 work, including many still in school.

**FIGURE 24**

**Rate of Labor Force Participation and Effect of Multiple Workers in Family on Income of Married Couples, 1979**

A. Labor Force Participation

| | Number | Percent |
|---|---|---|
| Married Men at Work in 1979 | 208,454 | 82.9% |
| Married Women at Work in 1979 | 143,470 | 57.0% |
| Number Working Full Time: | | |
| A. Husbands | 153,046 | 60.9% |
| B. Wives | 53,506 | 21.3% |
| Households in which both work full time | 39,042 | 15.5% |

B. Effect on Income

| | Median | Mean |
|---|---|---|
| All Married Couples | $17,303 | $19,426 |
| With Wife in Labor Force | $20,005 | $21,666 |
| With Wife not in Labor Force | $14,252 | $17,215 |

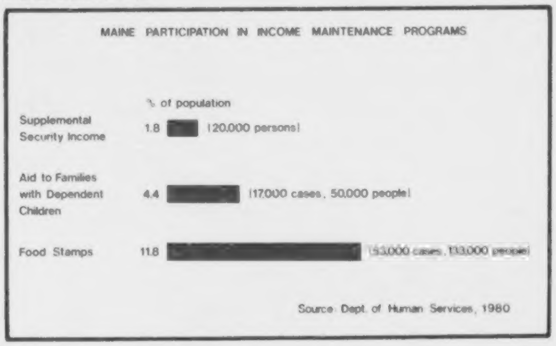
Source: 1980 Census

## 7. DEPENDENCE

**Inability to support oneself and one's family results in dependency on others or on public resources, and in a corresponding sense of powerlessness.** At any given time, nearly one-fifth of the State's population is receiving help from a major income assistance program. The total number served throughout the year is much larger, the turnover rate varying from one program to another.

A University of Michigan study found that half of all AFDC recipients are short-term cases and that one-fourth of Michigan's population had received AFDC support at some time during the ten year period of the study. Though data for Maine is incomplete, monthly data on case openings and closings suggests similar conclusions.

**FIGURE 25**



Source: Dept. of Human Services, 1980

**Assistance programs are designed to provide only a portion of the minimum requirement for meeting basic needs.** For example, in 1984, the Aid to Families with Dependent Children (AFDC) program provides only seventy-two percent of the 1979 minimum budget[1]. Based on today's poverty guidelines, a family receiving AFDC receives an amount equal to less than fifty percent of the present poverty level. **Persons and families who must depend solely on such programs are extremely disadvantaged.**

---

[1] In 1984, the minimum amount of income required to meet "full need" was determined to be $4,548 for a family of two, an amount equal to the 1979 poverty level for a family of two. The maximum allowed benetit under the AFDC program is currently only $275 per month or only seventy-two percent of the 1979 poverty level for a two-person household.

# IV

# The Changing Structure of Poverty: Emerging Trends

Over the past decade, many of the factors that determine the nature and extent of poverty have changed. Three trends emerged in the 1970's which will affect Maine in the 1980's:

1. The number of poor increased, although poverty rates have not changed. The increase in poor has been primarily among working age adults, with women disproportionately affected.
2. Other changes have resulted in a reduction or stabilization in the poverty rate, especially among the elderly and children. However, much of this "progress" may be in jeopardy in the 1980's, and could be only temporary.
3. There are growing regional disparities and major shifts in the character of poverty.

A combination of economic and demographic trends are the major causes of these changes. A number of changes in federal government policies towards the poor have also occurred or have been proposed. Maine's response to the needs of the poor will be shaped by both the nature of poverty in Maine today and by decisions of federal policy towards the poor.

## 1. MORE POOR AND GREATER RISK OF POVERTY

While the rate of poverty in Maine remained unchanged between 1970 and 1980, the number of poor in Maine increased by 10,000. Nationally, the number of poor increased by more than two million between 1970 and 1980. The Census Bureau estimates that the national poverty rate has risen from twelve percent to fifteen percent during the early part of the 1980's; and that the number of households on the borderline of poverty has also increased[1]. Data for individual States for this period is incomplete, but similar trends are indicated in Maine.

**Changes in our social and economic structure, record increases in the cost of living during the 1970's, followed by recession during the 1980's and changes in federal policy, are the major causes for the increased number of poor.** A recent Congressional study[2] has linked increases in poverty since 1980 among children and adults not in the labor force to cuts in the welfare budget made in 1981. In addition, the number of people assisted by the federal "safety net" of social programs has been shrinking as eligibility guidelines are tightened. The people most adversely affected are the poor who have only a small amount of earnings. This is a major concern in Maine with its greater number of underemployed.

## 2. THE "NEW" POOR

**During the 1970's, the increase in the number of poor was entirely among the adult population.** The number of adults age 18 to 44 below poverty increased by fifty-two percent.

The poor have generally been thought to be those who are unable to provide for themselves through traditional means: children, elderly, handicapped or disabled, large families and single parents with small children. These sectors of the population have greater rates of poverty than average, and need special attention. **However, the increasing incidence of poverty among adults suggests that a new look at traditional programs to assist the poor, and a new focus towards creating employment opportunities and serving the needs of working age adults, are needed.**

**FIGURE 26**

**Changing Age Composition of the Population Below Poverty**

| | 1970 | 1980 | % Change |
|---|---|---|---|
| Under 18 | 49,338 | 49,862 | 1.1 |
| 18-24 | 13.374 | 20,295 | 51.7 |
| 25-44 | 19,761 | 29,985 | 51.7 |
| 45-64 | 18,460 | 19,301 | 4.6 |
| 65 and over | 29,965 | 21,533 | -28.1 |
| Total | 130,902 | 140,996 | 7.7 |

---

[1] U.S. Census Bureau Advance Report, "Money, Income and Poverty Status of Families and Persons in the United States", 1983

[2] U.S. House of Representatives, Committee on Ways and Means, "Effects of the Omnibus Budget Reconciliation Act of 1981 (OBRA) Welfare Changes and the Recession on Poverty", July 1984

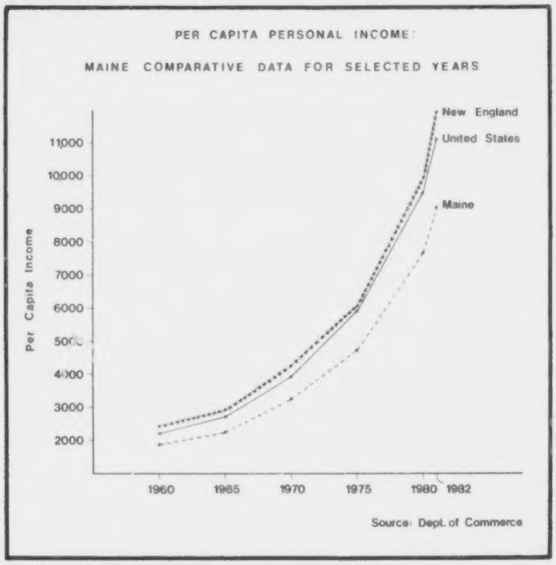
The increase in poverty among adults is associated with the changes in the Maine economy over the last fifteen years, and with changing household and family structure.

Maine has historically been highly dependent upon its natural resource based industries (agriculture, forestry, and fishing), industries which are characterized by seasonal work and fluctuating incomes.

However, trade and service industries have been the fastest growing sectors of the Maine economy since the mid 1960's. Almost two-thirds of all the jobs in Maine are now in these sectors. This has made Maine's economy more similar to the national economy, but the new jobs in trade and services are similar to those in natural resource industries in that they are often available only on a part-time or a part-year basis. They also are often relatively low-skill jobs, paying lower wages than in manufacturing.

The combination of Maine's historic reliance on natural resources and the growth in trade and services, both of which have relatively low average wages and a great deal of part-time or part-year employment, means that Maine has generally lower per capita income than the nation. Moreover, the State Planning Office Forecast for the Maine Economy[1] indicates that the trade and service sectors will continue to supply most of the growth in the 1980's. This is also true for the U.S. economy.

**FIGURE 27**



The poor are concentrated in predominantly low-wage, seasonal jobs found in the trade and service and natural resource sectors which dominate the Maine economy. As part-time and temporary work expands, the lack of employee benefits associated with these jobs, such as health insurance and retirement plans, can be expected to erode further the standard of living today and at the time of retirement. A working paper published by the Ford Foundation[2] finds that "low hourly earnings and restricted hours of employment are more significant overall causes of labor market-related hardship than joblessness."

A changing labor market challenges both the worker and the institutions which impart knowledge and skills. In the 1960's and 1970's, new jobs were needed for young people entering the market. However, more than ninety percent of the people who will be in the labor force in 1990 are there now. Thus, **the challenge before us will be to provide today's workers with opportunities to improve skills and learn new ones as jobs are lost in more mature industries.**

The increase in poverty among adults is also due, in part, to changing household and family structures, especially the rapid expansion of single-parent households. Single-parent households are rapidly growing as a proportion of all Maine families. They are at a severe disadvantage because their income is limited to that of one adult, at best. Most are headed by women who tend to have very low income.

A trend referred to as the "feminization of poverty" has provoked concern. Females make up a large (58%) and growing share of the Maine's poor. Their proportion can be expected to increase in the future. Because of differences in life expectancy, women will continue to outnumber men among the elderly, and they will have a higher risk of poverty because of lower retirement benefits due to variations in work history. In addition, changes in marriage and divorce patterns will continue the increase in single-parent, predominantly female-headed families in which earning capacity is limited. The income and occupational gap that exists between men and women in spite of educational qualifications must be addressed.

Although more women have joined the labor force, they often hold low-wage positions. The profile of working women is changing as more seek non-traditional employment and develop professional careers, but this transition to the professions is not as fast as the rise in single-parent families and single-person households or the increased rate at which women are entering the labor force.

---

[1] Maine State Planning Office, **The Maine Economy: A Forecast to 1990,** Dec. 1982

[2] Ford Foundation, **Not Working: Unskilled Youth and Displaced Adults,** August, 1983

**Efforts to break traditional occupational barriers and reduce the gap in earnings between men and women are constrained by the fact that most job growth has been, and will likely continue to be, in low-wage occupations that women tend to hold.**

## 3. STABILIZING FACTORS

A number of factors served to stabilize the poverty rate among certain groups during the 1970's. However, it is unclear whether these factors will continue to provide a stabilizing influence in the 1980's.

The poverty rate among the elderly declined in the 1970's, largely due to changes in the Social Security and medicare programs, and because recent retirees have paid longer into the Social Security program. However, the Social Security system and the Medicare program are likely to continue to be the targets of proposals to reduce federal deficits, which could affect the future level of poverty among the elderly.

The number of poor children remained constant in the 1970's. A significant increase in those living in single-parent families was offset by the trends toward declining birth rates and smaller families. But the number of families headed by single mothers is increasing in the 1980's. As this trend continues, children will face a growing risk of poverty.

Declining family size, which helped to reduce the poverty rate by nearly fifty percent in the 1960's, continued into the 1970's. Children who grew up in large families in the 1960's and earlier are young adults choosing to have fewer children today. Since the guidelines for determining poverty are based upon the relationship of family size to income, **the decline in family size over the last 20 years served to stabilize the poverty rate without any actual increase in income.**

By the early 1970's, however, the impact of declining family size on the poverty rate had peaked. The economic disruptions of the 1970's,, coupled with rapid growth in the number of families, as children of the post war "baby boom" reached adulthood and formed families of their own, accounted for a twelve percent increase in the number of poor families between 1970 and 1980.

In addition, Maine's long history of out-migration was reversed in the 1970's, as more Mainers remained in the State and a large number of inmigrants moved to Maine. Economic growth, though substantial, was not sufficient to accommodate all the growth in the adult population. Thus, many of the children who were poor in the 1960's are young adults living in poverty today.

Another stabilizing effect on the poverty rate has been the emergence of the two-worker household. While declining family size has enabled homemakers to work outside the home, the erosion of real family income during the 1970's have made two paychecks essential for many families. The impact of this trend is limited by the increasing number of single-person households and single-parent families.

## 4. REGIONAL DIVERSITY AND DISPARITY

Although Maine's poverty rate is only slightly higher than the national average, there are important differences in the nature of poverty between Maine and the nation, and within Maine itself.

Maine lacks large blocks of ethnic and racial minorities. Nationally, thirty-one percent of the poor are black and fourteen percent are Hispanic. **Nationally, only 9.4% of the white population lives in poverty. In Maine, nearly all of the thirteen percent of the population who are poor are white.** Minority groups also have higher rates of poverty in Maine, but the minority population in Maine accounts for less than one percent of the total State population.

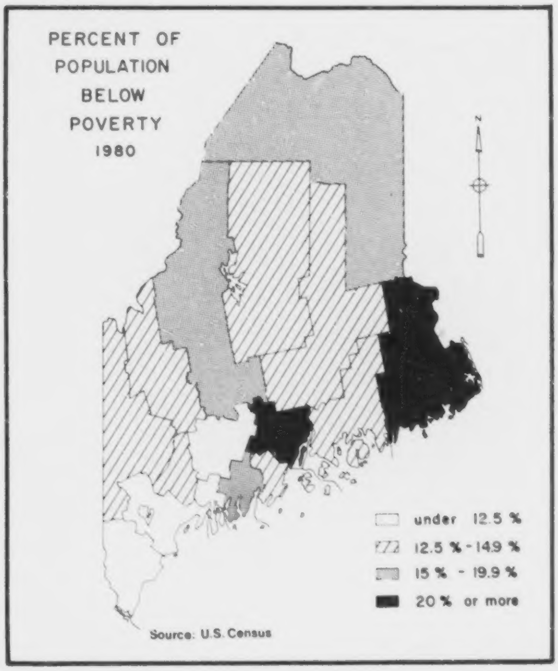
High rates of poverty afflict Maine's largest cities, and nearly every community in the State has its own "pocket of poverty." But Maine lacks large ghetto-like concentrations; extremes of wealth and poverty and physical isolation and segregation are minimal in Maine.

Nonetheless, within Maine, significant regional disparities exist. Differences occur in the industrial and occupational mix of various regions within Maine, and in the distribution of opportunities for education, skill development, and human growth. There are also variations in family size, proportion of elderly, and availability of services needed by the poor.

Economic distress[1] is most severe in the more rural regions that lack either a major industry or a diversity of employment and services. It is also severe where major industries have met with economic hardship due to obsolesence of either product or plant, competition from imports, or to cyclical factors in the national economy.

The conditions of poverty are most severe in the most rural and most urban places in Maine[2]. In general, however, higher rates of poverty prevail in rural areas, where seventeen percent of the population live below the poverty level, compared to twelve percent in urban and suburban communities.

**FIGURE 28**



Source: U.S. Census

The characteristics of the poor and the character of poverty vary among regions. Families headed by single women tend to be concentrated in urban areas, but female-headed families residing in rural communities are much more likely to be poor (37% below poverty compared to 30% in urban areas). Rural families headed by an elderly householder also have a higher poverty rate; and in rural areas, fewer students complete high school and fewer people seek post secondary education. Rural areas have fewer job opportunities, and considerably fewer workers in the labor force; underemployment is greater, and unemployment lasts longer.

The income level in Maine also varies greatly from one region to another. In metropolitan areas income more closely resembles the national average while income in rural areas is much lower and more comparable to other rural, distressed regions of the country. Income in southern Maine is nearly double that of Waldo and Washington counties.

Income growth during the 1970's was distributed unevenly. Some areas experienced great increases, while others lagged behind. It is in these slow growth areas that poverty increased most. The most severe conditions are found in Waldo County, which has ranked lowest in per capita income since 1980.

---

[1] The term economic distress refers to the extent to which an area or community suffers from high rates of poverty, slow or no economic growth, low per capita income and related indicators of poor economic health.

[2] The State Planning Office has classified Maine's 498 municipalities into ten community types based on their size and the relative scale of their economy, and the role they play in their respective regions. These ten types are broadly grouped into three categories (rural, urban, and suburban).

**FIGURE 29**

N
▪ above state average
▨ equal to state average
▧ below average but gaining
▩ below average but keeping pace
☐ below average and lagging further behind

Source: SPO

Although income has increased at a greater rate in both rural and suburban communities, on average it still lags behind urban areas. In 1979, forty percent of rural households reported income under $10,000, compared to thirty-five percent of urban and thirty percent of suburban households.

**The opportunity for full employment or for earning supplemental income varies with the local job mix, and is the key underlying factor that determines the absence of poverty in an area.**

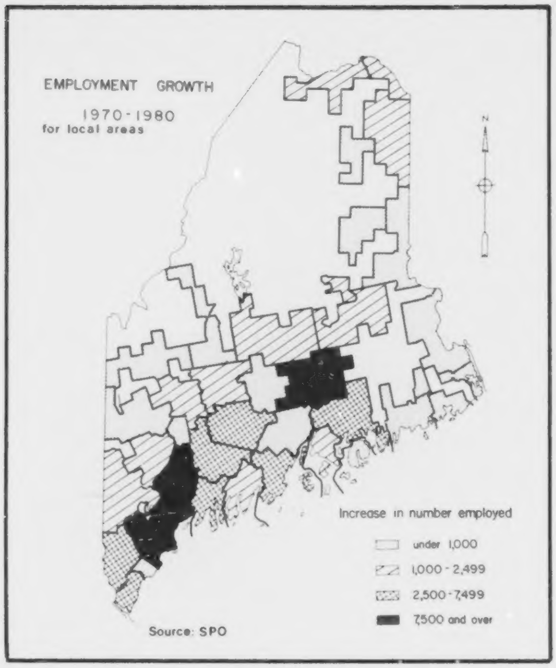
Regional variation in occupations and in the nature of full and part-time work greatly contributes to the degree of economic distress. Jobs involving natural resource industries, which are often available only seasonally, are concentrated in rural areas, while urban centers and the coastal region offer more trade and service sector jobs.

Employment growth, like income, was also uneven within Maine during the 1970's. The largest gains were concentrated in the I-95 Corridor and along the coast west of Bar Harbor.

---

[1] The State Planning Office has divided the State into 37 local areas, or "Extended Communities" for the purpose of analyzing the State's economic and social structure. The "Extended Community" is defined as the geographic area in which most of the people carry out their normal day-to-day activities (working, shopping, entertaining, etc.)

FIGURE 31



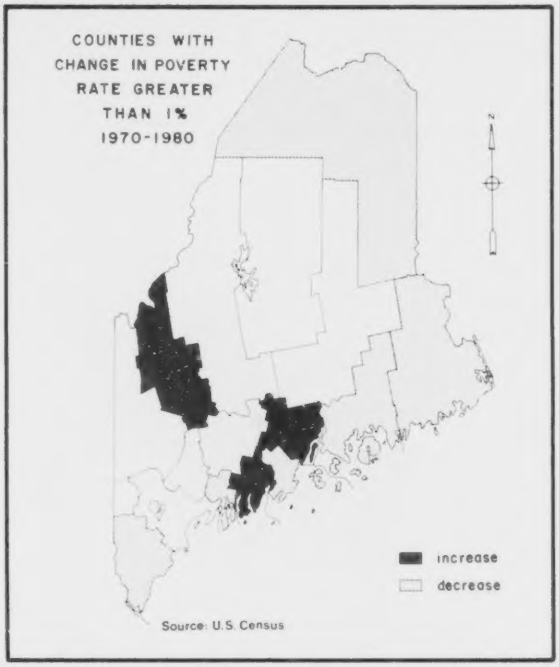
From 1979 to 1982, seventy-five percent of the new jobs created were located in four counties which are highly dependent on trade, services and defense contracts: Cumberland, York and Sagadahoc (up 2,000 each) and Lincoln (up 1,200).

Counties showing the greatest decline in employment are heavily dependent on manufacturing and government, or are predominantly rural in character and isolated. For example, Androscoggin County lost 2,000 jobs between 1979 and 1982. Aroostook, Waldo, Washington, Oxford, Kennebec and Penobscot Counties also experienced large losses, resulting in large part from declines in the shoe and poultry industries.

Growth in earnings follows a similar pattern for the same period. The only county reporting a loss was Waldo, where earnings dropped $50 per worker from $9,343 in 1979 to $9,283 per worker in 1982. Income growth in most counties ranged from $2,000 to $3,000. Statewide, earnings per worker increased from $11,144 to $13,855 (unadjusted for inflation) between 1979 and 1982.

While their positions relative to each other have changed since 1970, four counties—Aroostook, Somerset, Waldo and Washington—continue to have the severest conditions of poverty.

FIGURE 32



If these patterns continue, regional disparities in poverty will increase. Unequal employment opportunities tend to increase the rate of population movement among people in the labor force, leaving behind those not in the labor force such as the elderly or handicapped, and the marginally employed. Since such groups have higher rates of poverty, their increasing share in an area's population will contibute to rising rates of poverty.

Three regional patterns of growth have been projected for the remainder of the 1980's. Southern Maine (York and Cumberland Counties) accounted for fifty-two percent of the State's 1980 population but is expected to receive 61-64% of the new jobs created by 1990, according to a 1982 State Planning Office forecast[1]. By contrast, Northern (Aroostook) and Central Maine accounted for eight percent and forty percent of the population respectively but are expected to experience slower rates of job growth. Of the projected new jobs, only 4% to 5% will be in the Northern Maine and 30% to 35% in Central Maine.

---

[1] Maine State Planning Office, **The Maine Economy: A Forecast to 1990**

Distance from markets and difficulty of access are constraints upon Maine's most remote regions. Investments to improve transportation and infrastructure, to revitalize and strengthen urban trade and service centers, and to increase and diversify job opportunities brought improvement to these areas in the 1970's, though they still lag behind the State as a whole. Conscious targeting of Maine's resources toward economic development projects that increase jobs and incomes, and toward improved infrastructure that will make a depressed region more attractive to private investors, has proven an effective method for reducing poverty and distress, though it has been costly on a per capita basis.[1]

# Conclusion

This study was undertaken to determine who is poor in Maine and why; and to assess the changes that have occurred since the "War on Poverty" was declared in the mid 1960's.

The focus of the study has been to provide information indicating the approaches in new policies and services needed to reduce the level of poverty.

The characteristics of the Maine population have changed since 1970, placing new demands on the social structure, on the economy, and upon the support systems and services that assure a minimum standard of living to people unable to provide for themselves.

There have been increases in the number of poor and near-poor. Poverty, as measured by the Bureau of the Census, is determined according to income and household size, and is based on assumptions about what constitutes the day-to-day needs of life and their costs. Because low income people move in and out of poverty as the economy fluctuates, or as their personal circumstances (health, presence of children, etc.) dictate, the actual number of poor is not easy to pinpoint.

People are poor because they lack access to economic opportunities due to both real limitations (lack of skills, transportation to work, poor health, etc.) or perceived limitations (socially or culturally determined benefits and traditions). And being poor, they are vulnerable to a multitude of problems. They cannot fully participate in the economy because they lack adequate employment opportunities; they are insufficiently educated or trained; they endure poor health; or they have preschool children at home requiring care. The people left out and left behind are those who can't compete in an economy unable to provide full employment and adequate wages to everyone who can work, and adequate alternatives to those who cannot work.

In determining who is poor, age and sex continue to be key factors; but their function has changed in recent years. Increased benefits for the elderly have decreased their risk of being poor, while changing family structure and composition have increased the risk for women and children. Although women have gained increasing economic status, low wages and the seasonal nature of much of the Maine economy place a growing number of both men and women at risk of poverty.

Extreme variations in poverty exist in Maine. Poverty is greatest in rural areas where there is little economic diversification. Distance and isolation decrease services to rural people, and limit their economic growth possibilities. Growing regional disparities need special attention in order to reverse historical trends.

The ability of people to escape poverty with or without significant public investment has been debated for some time. To reduce poverty requires the efforts of all sectors. Drastic cuts in federal assistance in the 1980's impede progress and present special obstacles and challenges to the State. More restrictive eligibility requirements for federal aid are of special concern, given the structure of the Maine economy.

Greater access to improved economic opportunities and support services (such as day care, increased education, rehabilitation, retraining, etc.) are needed. Jobs, however, are only part of the solution. Many poor are unable to work due to age or poor health and disability. The needs of the poor are as different as the people themselves, and the services and opportunities must reflect this diversity.

The prospect that poverty could increase further in this decade is of great concern. The trends established in the 1970's provide warning signals which, if heeded, can not only prevent any further increase, but can lead to new policy directions for reducing poverty in Maine.

The purpose of this report is not to table our debates, but to illuminate them. We hope it will kindle new insights and awareness, and a renewed commitment to effective action.

# PREFACE

Poverty in Maine: Volume II is a statistical compilation of information on poverty in Maine and on the social, demographic, and economic factors which contribute to poverty. The abstract provides both current information and an historical view of the trends and changes that have occurred since the 1960's. Finally, it provides data to compare Maine to the nation and to allow for examination of regional disparities within the State.

This volume is the second in a four part series. It provides detailed data on the Trends and Conditions which were summarized in Volume 1. Volume II has been prepared in similar format to Profile of Poverty -- Maine: A Data Source, which was published a decade ago and is intended as an update to that report.

# CONTENTS

1. Overview: Patterns of Social and Demographic Change

2. Overview: Structure and Trends in the Maine Economy

3. Poverty: Definition and Extent

4. Social and Demographic Factors

   4.1 Population Composition
   4.2 Social Structure
   4.3 Education
   4.4 Special Populations at Risk

      A. Children
      B. Youth
      C. Elderly
      D. Single Parent Families

5. Economic Factors

   5.1 Income
   5.2 Employment: Unemployment: Underemployment
   5.3 Economic Structure

6. Effects of Poverty

   6.1 Health and Disability
   6.2 Housing Conditions
   6.3 Dependency
   6.4 Other Problems and Needs

MAINE'S POPULATION GROWTH

1890 - 1980

Source: US Census

# POPULATION TRENDS

## I. Growing Population

Prior to the 1970's, Maine's population grew very slowly, increasing by only 5% per decade. In the 1970's the population grew by 13.2%, reflecting a major national shift in settlement patterns. Two components account for population change -- natural increase and migration. They are, in turn, affected by economic conditions, changing values, and quality of life factors.

### A. Natural Increase

Natural increase in population reflects the extent to which the number of births are greater than the number of deaths. Changes in birth and death rates effect the amount of natural increase in population that occurs over time.

#### 1. Decline in Death Rate

Advances in medicine resulting in longer life expectancy have contributed to a slow but steady decline in the death rate throughout the century (from 16.4 deaths in 1900 to 9.6 deaths in 1980 per thousand population). Infant death rates have been reduced by 50% in the last decade alone (20.9 in 1970 compared to 9.3 in 1980). At the turn of the century, the infant death rate was 268 deaths per thousand births. Maternal death rates likewise have been reduced to a fraction. In 1980, there were no maternal deaths in Maine. Since 1966, there have been 5 years when no maternal deaths occurred.

#### 2. Decline in Birth Rate

Unlike the steady decline in the death rate, the birth rate is more likely to fluctuate with national events and economic conditions. The birth rate was highest in the mid 1900's and lowest at the turn of the century and in current times. Since the "post-war baby boom" of the 1940's, the birth rate has declined at a slow but steady pace.

### 3. Migration

Prior to the 1970's, Maine had suffered long term net out-migration, broken only by a small in-migration at the turn of the century. In the 1970's, a reversal of the trend occurred resulting in a net in-migration of 75,000 people. A reversal of the longterm trend toward urbanization and a major re-distribution of the State's population occurred as people moved to suburban fringe areas and to outlying areas while larger urban centers lost population.

## II. Changing Distribution

Maine is a rural state by national standards. Two thirds of the population is concentrated in a growth corridor; nearly half of the State's territory uninhabited. The rural-urban-suburban settlement pattern is similar to other parts of the country though lower in density. Population growth in the 1970's was unevenly distributed. Most of the increase occurred in the I-95 corridor and in the mid coast area. Small towns near urban areas grew very rapidly. Maine's suburban communities grew by 41% in the 1970's (by 54% in the I-95 corridor). In spite of significant increases in population during the 1970's, some of the most distant areas continued to lose population through out-migration. And, in spite of gains in recent years, many of the more rural counties still have smaller populations today than they had a century ago.

## III. Changing Composition

Maine's population is getting older. The median age in 1980 was 30.4 years, up from 28.6 years in 1970, a reflection of the decline in children and increase in elderly population.

### A. More Elderly

The elderly comprise an increasing share of the state's population. Today 12.5% of the population is age 65 or over, an increase of 23%, or 26,300 elderly since 1970. Twenty two percent of the households in Maine are headed by a person at least 65 years of age. Maine ranks 11th in the nation in the percent of elderly. Because of the large elderly population Maine's death rate is 12th highest in spite of steady decline.

### B. More Women

Because women have a longer life expectancy than men, the ratio of women to men is increasing gradually. Women account for 60% of the elderly population.

### C. Fewer Children

Children account for a declining share of the population. Progress made to reduce the number of infant deaths is outweighed by preference for smaller families and increased acceptance of birth control practices have contributed to a declining birth rate. In 1980, Maine's birth rate ranked 40th in the nation.

### D. More Young Adults

During periods of out-migration, young adults have been the first to leave. The turn-around in the 1970's resulted in a growth rate of 35% or 114,000 young adults between the ages of 18-44. This age group accounts for 40% of the 1980 population.

## IV. Changing Household and Family Structure

### A. Marriage and Divorce Rates

Although the number of marriages continues to rise, the number of people remaining single or delaying marriage has increased. The divorce rate has also increased sharply. In 1900, only 801 divorces were granted. In 1980, there were 6,189 divorces, 1 for every 2 marriages that occurred. Maine ranks 9th in the nation in the rate of marriages and 20th in divorce rate.

### B. Single Parent Families

Since 1970, the number of households headed by a single parent has more than tripled. Twelve percent of Maine households are headed by a single parent; 11% by women. The number of families headed by women increased by 43% while the total number of families grew by only 19%.

### C. Smaller Households

The average household size has declined from 3.2 to 2.75 persons per unit since 1970. The number of households with 6 or more members declined by 50% in the last decade. The number of households grew by nearly 30%, more than twice the rate of population growth.

## D. Single Person Households

In 1970, there were 50,000 single person households in Maine. That number grew by 66% (85,000 by 1980). Some of the increase is due to a growing adult population. However, the largest share is due to the increasing elderly population, especially women. Single person households make up an increasing share of all households in the State, rising from 16.6% in 1970 to 21.2% in 1980.

# MAINE POPULATION BY COUNTY
## 1970 - 1980

| County | 1980 | 1970 | % Change |
|---|---|---|---|
| Androscoggin | 99,657 | 91,279 | 9.2 |

## CRUDE BIRTH RATE, 1900 - 1980

| | Live Births | Birth Rate (Per 1000 Population) |
|---|---|---|
| 1900 | 14,095 | 20.3 |
| 1910 | 15,798 | 21.3 |
| 1920 | 17,495 | 22.7 |
| 1930 | 16,199 | 20.3 |
| 1940 | 15,285 | 18.0 |
| 1950 | 21,239 | 23.2 |
| 1960 | 23,282 | 24.0 |
| 1970 | 17,837 | 17.9 |
| 1980 | 16,474 | 14.6 |

Source: Maine Dept. of Human Services, Div. of Research & Vital Records.

*The crude death rate is a count of the number of deaths that have occurred during a given period of time. Crude rates, unlike age-specific rates, do not take into account the fact that the number of births and deaths vary with the age of the population and with health and fertility factors. Therefore, for example, the crude death rate in Knox and Lincoln Counties is very high - not because more people are dying per se, but because those two counties have a higher population of elderly.

## CRUDE BIRTH RATE, ANNUAL DATA FOR YEARS 1970 - 81

| Year | Live Births | Birth Rate (Per 1000 Population) |
|---|---|---|
| 1970 | 17,837 | 17.9 |
| 1971 | 17,850 | 17.6 |
| 1972 | 16,269 | 15.9 |
| 1973 | 15,730 | 15.1 |
| 1974 | 15,110 | 14.4 |
| 1975 | 15,232 | 14.3 |
| 1976 | 15,046 | 14.0 |
| 1977 | 16,252 | 14.9 |
| 1978 | 15,919 | 14.5 |
| 1979 | 16,435 | 14.7 |
| 1980 | 16,474 | 14.6 |
| 1981 | 16,567 | 14.6 |

Source: Maine Dept. of Human Services, Div. of Research & Vital Records.

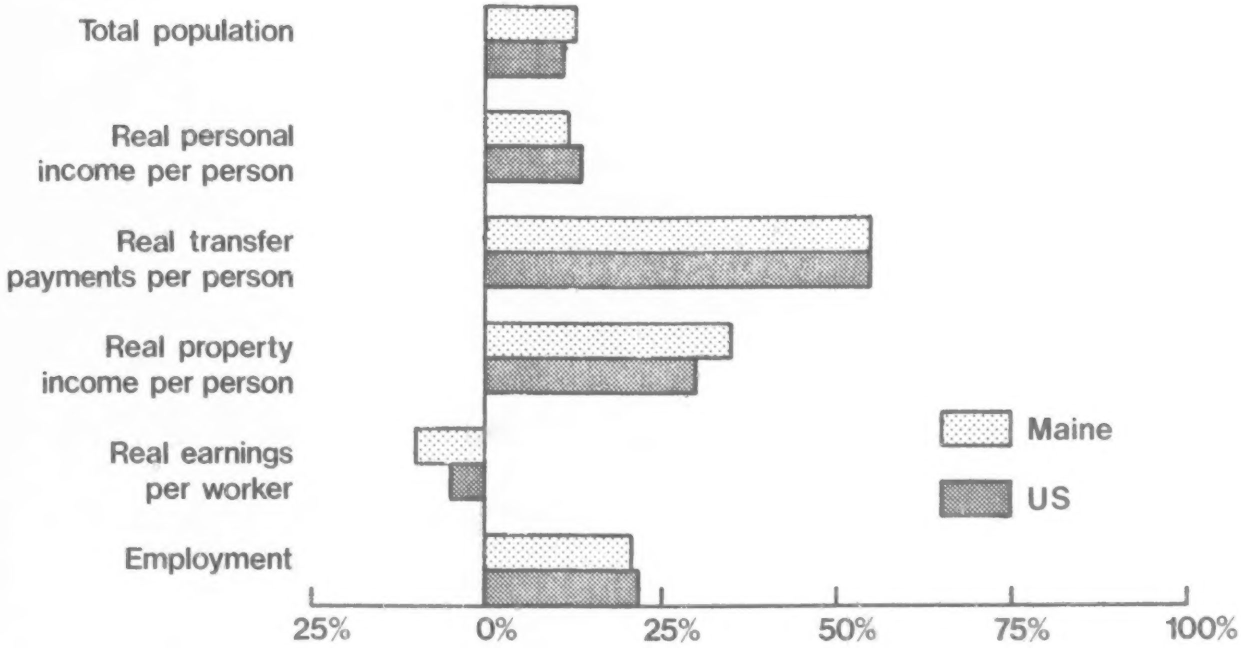
## 2.

# Overview: Economic

## Indices of Economic Growth in Maine and the US [%]

### 1970 - 1980



Source: Bureau of Economic Analysis

# THE MAINE ECONOMY

## FACTORS THAT EFFECT ECONOMIC CONDITIONS:

1. Consumer Prices, Inflation, Interest Rates
2. Geography, Climate, Environment
3. Natural Resource Base
4. Transportation and Access
5. Finance, Taxation and Government Spending
6. Occupation/Industrial Mix
7. Wage Structure
8. Full Time - Part Time Employment Ratio
9. Gross State Product and Export Trade
10. Level of Infrastructure Development
11. Federal Policies & Regulatory Practices

The factors that effect economic conditions and ultimately the rate of poverty are complex. Some often seem remote from the perspective of the individual who is merely trying to earn an income and provide for the needs of his/her family.

The Maine economy is characteristic of other highly rural states in the U.S. Maine is twice as dependent upon natural resource industries than the nation as a whole. Natural resource products account for a third of Maine's exports, providing over half of the value of the State's industrial output in 1980.

## A. Value of Product

Maine's Gross State Product (GSP) is valued at over $10 billion. Since 1975, the GSP increased by nearly 90%. Manufactured products account for the largest share (27.4%) followed by trade, government services, and finance. The value of Maine's raw products has also contributed significantly. In 1982, $400 M worth of agricultural products were produced on Maine farms.

## B. Effect of Consumer Prices and Inflation

Inflation became a serious problem during the 1970's. Prices have quadrupled since the 1967 base year*. Energy costs increased to over 5 times their 1967 value. Maine's cold climate and dependence on oil for home heating coupled with its rural character and its geographic isolation have caused Maine people to suffer the severest effects of the energy shortage. In response, Maine people have been leaders in reducing energy consumption. In 1980, Maine ranked 7th in the percentage of workers commuting in carpools and 40th in per capita energy consumption in spite of the fact that only three states in the U.S. have an average temperature lower than Maine's.

Inflation has the effect of reducing the real value of income and reducing purchasing power. Taxable sales increased by 141% between 1974-83 while consumer prices rose by over 150%. People spent more for less during the 1970's, a factor felt by the manufacturing sector and ultimately reflected in the number of jobs available.

---

Gross State Product (GSP) is similar to the GNP (Gross National Product). It is a measure of the State's, or nation's, output (i.e., the productivity of its economy).

* The CPI (Consumer Price Index) is computed by the U.S. Department of Labor. Traditionally the 7th year of each decade has been used as the base year.

## Public Spending and Taxation

Public expenditures by state and local governments have remained relatively constant in recent years and have actually declined slightly in real dollars. State and local taxes account for 12% of total personal income. Since income has risen while government expenditures have held steady, taxes as a portion of personal income have declined from 12% in 1978 to 11.9% in 1981. As federal funds are cut, the burden placed on state and local levels has increased. The most significant area of shift in burden in recent years has been toward state responsibility for welfare related programs and services that primarily serve the poor.

## Structure of the Labor Force

Overall, the number of new jobs has grown at twice the rate of the State's population (27% compared to 13%) since 1970. However, the increase of 90,000 new jobs compared to 127,000 additional adults means fewer job opportunities per capita.

The labor force expands and contracts with the availability of employment opportunities. In addition to natural fluctuations, a growing proportion of the labor force is women. While an increasing number of women hold full time jobs and higher level positions, women are concentrated in part time, seasonal, and temporary positions. The data indicates that women have achieved acceptance in the labor force, but their role is still considered to be supplemental to the household income.

## Industrial and Occupational Structure of Employment

The industries upon which Maine's economy is based can be grouped into 7 categories: (1) Natural Resource production and processing, (2) construction, (3) clothing, (4) metals and electronics, (5) all other manufacturing, (6) trade and service, and (7) government service.

Since 1970 the structure of the economy has changed significantly. Although natural resource occupations continue to provide twice as much income for Maine people than is the case nationally (16% compared to 8%), and although the number of jobs provided has remained constant, their proportion has declined with corresponding increases in jobs in the trade and service sectors. Trade and service jobs have increased by 36% since 1970, accounting for 57% of all jobs by 1980.

## Trends in Income and Job Creation

Ninety percent of the employment growth in the last decade has been in lower wage jobs in Maine and in the nation. Eighty percent of jobs created in Maine during the 1970's were in trade, service, and government. Current forecasts predict these sectors will continue to provide most of the growth in jobs in the near future. Their characteristic low wage and seasonal or part time nature is responsible for declining earnings per job in the 1970's. This trend is projected to continue throughout the 1980's. Since most growth is in southern Maine, and trade and services are concentrated in urban centers in the I-95 corridor, continued rapid growth in employment opportunities is anticipated in those regions, but with declining wages. Other regions more dependent upon resource based industries will see less growth in jobs but maintain more stability in income per job.

# GROSS STATE PRODUCT

By Major Industry (in $ millions)

| Buildings & mobile homes | 22,779,460 | Blank books & bindings | 1,224,156 |
| Misc. wood products | 117,368,224 | Commercial printing (inc. letterpress & lithograph) | 26,995,323 |

Source: Maine Census of Manufacturing

NOTE: Lumber and paper are the two largest products from Maine forests in terms of volume. However, Maine manufacturers also produce paneling, particle board, shingles and other building supplies, wooden containers, lobster traps, matches, toothpicks, clothespins, barrels, furniture, wooden toys, biomass products, and many more items.

## PERCENT CHANGE IN CONSUMER PRICE INDEX (CPI-U) FOR SELECTED ITEMS

| Year* | All Items | Food and Beverages | Housing | Apparel and Upkeep | Transportation | Medical Care | Entertainment | Other Goods & Services |
|---|---|---|---|---|---|---|---|---|
| 1977-78 | 9.0 | 11.6 | 9.9 | 3.2 | 7.7 | 8.8 | 5.8 | 6.4 |
| 1978-79 | 13.3 | 10.0 | 15.2 | 5.5 | 18.2 | 10.1 | 6.9 | 7.9 |

## EMPLOYMENT TRENDS BY INDUSTRIAL SECTOR IN MAINE, 1970-1980

| Sector | Employment 1970 | Employment 1980 | 1970-1980 Percent Change |
|---|---|---|---|
| Natural Resources | 68,850 | 71,600 | 4.0% |
| Construction | 19,750 | 21,100 | 6.8 |
| Clothing | 40,050 | 33,500 | -16.4* |
| Metals & electronics | 17,000 | 26,900 | 58.2 |
| Other manufacturing | 7,100 | 8,900 | 25.4 |
| Government | 83,800 | 96,800 | 15.5 |
| Trade & services | 157,250 | 213,000 | 35.6 |
| Proprietors (nonfarm & nonfish) | 32,450 | 41,400 | 27.6 |
| Total | 424,800 | 512,600 | 20.7% |

*The clothing sector includes textiles, apparel and leather products. Maine firms make 15% of the domestically produced shoes. Since 1980 major restructuring has restored health to the industry. However, it remains in a state of instability due to large firms moving plants to underdeveloped countries.

Note: The natural resource sector includes the paper industry in which wages are among the highest in the state. Since Maine ranks second in the United States (below Wisconsin) in paper production, the size of the industry in Maine is sufficient to result in higher average wages for that sector than the national average.

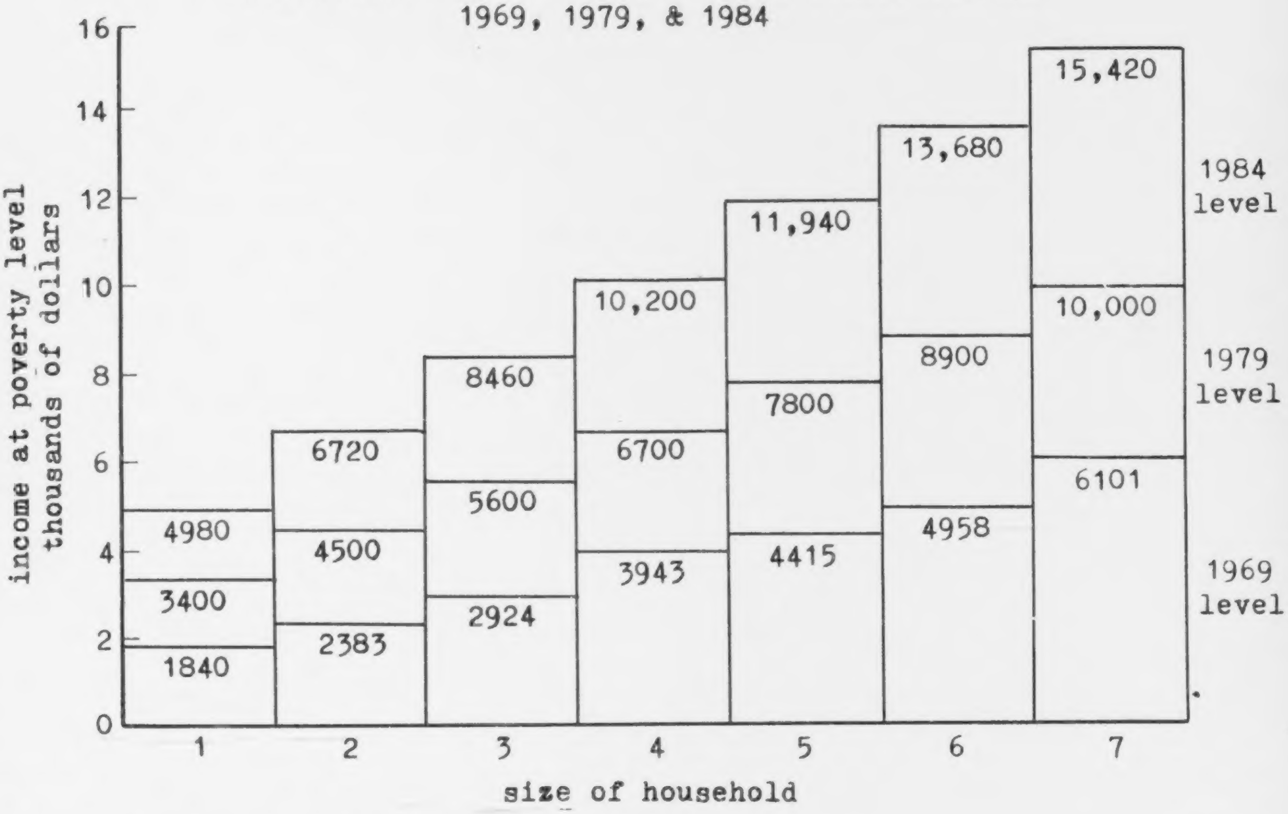
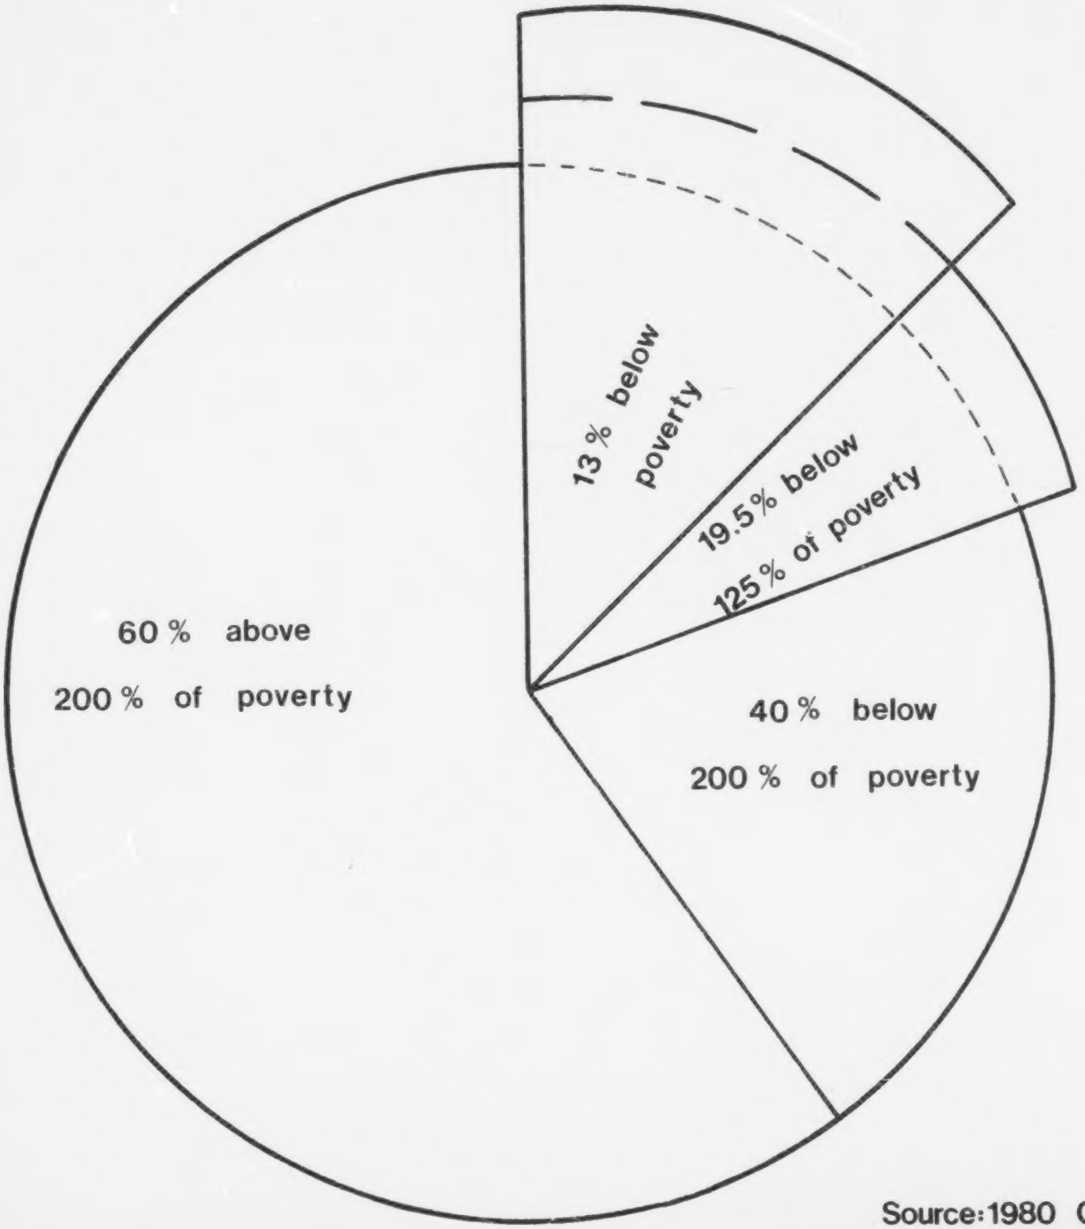
# Poverty: Extent and Definition

## POVERTY LEVEL FOR A NON-FARM FAMILY

1969, 1979, & 1984



Source: US Office of Management and Budget



Source: 1980 Census

## POVERTY: DEFINITION AND EXTENT

Poverty is commonly defined as the amount of income needed for a household of a given size to attain a certain standard of living. Several different measures are used by State and Federal agencies to determine eligibility of communities and families or individuals for certain types of assistance.

The measures include the poverty guideline as established by the Office of Management and Budget (OMB) or some percentage of thereof (125%, 150% of the poverty level), the median household or family income of the county or community, and the cost of living budget as determined by the U.S. Department of Labor.

Thirteen percent of the Maine population, or 141,000 people are living below the federally established OMB poverty line. Nearly one in five are below 125% of the poverty level, and forty percent have income less than the amount required to meet the "lower level standard of living" (200% of the poverty level) as established by the U. S. Department of Labor. The number of poor in Maine has increased by 10,000 people since 1970.

Maine's poverty rate is very similar to the national average and has remained so since the 1960's when poverty was first measured. The growth in number of poor in Maine follow the national trend. There are 27.5 million people living in poverty in the U.S., 2 million more than in 1970. There is further indication that the number of people living below poverty has continued to rise since the 1980 census was taken.

## POVERTY LEVEL

| Household Size | Federal Poverty Level in 1979 100% | Federal Poverty Level in 1979 125% | Federal Poverty Level in 1979 150% | Federal Poverty Level in 1984 100% | Federal Poverty Level in 1984 125% | Federal Poverty Level in 1984 150% |
|---|---|---|---|---|---|---|
| 1 person | $3,400 | $4,250 | $5,100 | $4,980 | $6,225 | $7,470 |
| 2 persons | 4,500 | 5,625 | 6,750 | 6,720 | 8,400 | 10,080 |

# 4.

# Factors: Social and Demographic

## 4.1

## POPULATION COMPOSITION

## DEMOGRAPHIC FACTORS

The rate of poverty varies with certain demographic factors. Women comprise 52% of the state's population but account for 58% of the population living below poverty.

Differences between the sexes in birth and death rates and in life expectancy, coupled with social expectations and patterns of labor force participation account for the variation in the poverty rate among men and women.

Half of the poor are under age 18 or over age 65. The rate of poverty is greater among the young and the old. However, during the 1970's, poverty increased most rapidly among adults. The number of people between age 18-44 below poverty has increased by 52% since 1970.

# SOCIAL STRUCTURE

# SOCIAL FACTORS

The structure of society has undergone significant changes since 1970. There has been rapid growth in single parent families and in single person households. The role of women is changing as a greater number participate in the labor force. An overall decline in family size due to declining birth rates, and preference for smaller families and to the greater emphasis of independent living arrangements for the elderly suggests society is very different today than a decade ago.

## Household Structure and Composition

### Families:

The traditional family has undergone significant changes. Half of the marriages end in divorce today. However, nuclear families make up 85% of all families in Maine and 82% nationally. There is a common perception that poverty is characterized by broken homes and unwed mothers. Yet two-thirds of the families below poverty in Maine are two-parent households, and half of the population below poverty live in families in which two parents are present. The poverty rate for families declined slightly between 1970 and 1980 (by -0.5%) but the actual number of families below poverty grew by 12.6%.

### Female Headed Families:

The number of families headed by single women has tripled since 1970. They account for a third of the families living in poverty. The rate of poverty is 3 times greater among families headed by women. However, they contain less than 25% of the total population living below poverty, 34,000 out of 141,000 people.

### Non Family Households and Unrelated Individuals:

Single persons and unrelated individuals (i.e., nonfamily households) are the most rapidly growing segment of the population. They account for 58% of the households living below poverty and for 28% of the people who are poor.

### Household Size:

The poor are commonly perceived as living in large families. In previous decades family size was an important factor. Large families are much more likely to be poor. However, the distribution of families by size among the poor today is very similar to the distribution for the entire population.

# 4.3

# EDUCATION

# EDUCATION

Educational attainment in Maine has increased steadily over the past 2 decades. In 1960 only 43% of the population had graduated from high school. By 1980, 69% had high school diplomas. A greater proportion of youth are remaining in school today. In 1980, 95.5% were enrolled, compared to 87.9% 20 years ago.

More women are high school graduates (71.3%) than men (69.1%). The proportion of men that go on to college is slightly greater (30.3% compared to 27.9% of the women) and the percentage of men who graduate is a third higher.

Educational attainment has a direct and marked effect on income. While income increases with education for both men and women, the gap in income widens with education. Mens' earnings rise more rapidly. The gap in income between men and women increases from $2,500 at 8 years or less of education to $9,500 for college graduates.

The median years of education of household heads living below poverty is slightly lower than average. Age is significant, however. Household heads under age 25 who are below poverty have an average of 0.2 years of education less than non-poor heads. By age 65 the average difference is nearly 2 years.

For people in the labor force, educational attainment directly effects poverty status. In 1980, sixteen percent of the poor in the labor force had 8 or less years of education; forty percent were not high school graduates. In contrast, only twenty-three precent of the people whose income is 200% of the poverty guideline or over were not high school graduates.

Educational attainment is reflected in occupation and industry of employment. Only 11% of the labor force is employed in professional and specialist occupations; half of the population with college degrees are employed in these occupations. In contrast, 25% of the persons with less than 8 years of education are factory operatives. Of the workers who did not finish high school, 25% are service workers and another 40% are factory operatives or precision production or craftsmen.

Persons working full time are more likely to be high school graduates. Only 20% have not compeleteed high school, compared to 30% of the total adult population.

Educational patterns are established early. Children from non-poor households are more likely to be enrolled in nursery school and kindergarten programs. Forty three percent of the children aged 3 to 5 in families where income is above poverty are enrolled in an educational program, but only thirty five percent of the 3 to 5 year olds in low income families are enrolled. By high school the drop out rate among the poor is more than twice as great (8.3% compared to 3.9% among the non-poor).

## 4.4

## SPECIAL POPULATIONS AT RISK

## SPECIAL POPULATIONS AT RISK

The combined effect of demographic and social factors substantially increases the probability of being poor. For example, the 15% poverty rate among children climbs to nearly 50% among children in female headed households. Sixteen percent of the elderly are living below the poverty line. But the poverty rate climbs to nearly 35% among single persons age 65 and over.

In addition, there are large sectors of the population for whom poverty is not perceived to be a problem and for whom the poverty rate is relatively low. However, when examined in terms of their share of the poor, these sectors take on far more significance. Single person households now account for a quarter of all households in the State and are a growing share of the population living below poverty. Half of the poor live in traditional families in which both adults are present -- not in broken homes. And, poverty is increasing most rapidly among the younger adult population, an age group thought to be able-bodied and adequately employed.

This section provides a brief sketch of the special populations among which the poverty rate is typically greater. It should not be overlooked, however, that poverty is growing more rapidly and becoming a greater factor to populations not traditionally viewed as being at risk.

# A.

# CHILDREN

# CHILDREN

The number of children in Maine has declined in the last decade. The decrease is attributed to a lower birth rate due to preference for smaller families and to a change in migration patterns which have resulted in a more rapid growth in the adult population and in retirees returning to the State.

Although there are fewer children, the number below poverty has increased slightly, resulting in a higher rate of poverty among children today (14.5% to 15.8%) than in 1970. There are nearly 50,000 children in Maine living in poverty. Sixty five percent live in families receiving AFDC.

Poverty increases in proportion to the number and age of children in a family. Families with children under age 6 are more likely to be poor primarily because of the trade-off for the parent between contributing to the financial needs of the family and providing child care.

# POVERTY STATUS OF MAINE CHILDREN BY AGE AND HOUSEHOLD TYPE, 1980

| Age | All Children | Children Below Poverty Number | Percent | Children in Female Head Hsld | Children in Female Head Households Below Poverty Number | Percent |

# B.

# YOUTH

## YOUTH

The age parameters that identify "youth" often vary depending upon the purpose for which one is defining youth. Data presented in this chapter generally cover the population between the ages of 16 and 24, or subsets thereof, as data is available.

About half of the youth under age 18 are employed, 17% working at least 35 hours per week. Youth make a greater contribution to the economic condition of their families than is recognized, serving to reduce the poverty rate. Among older youth (age 20-24), 75% are in the labor force, 62% employed full time. Males have a slightly higher labor force participation rate than females, as is true of the general population. The primary factor contributing to poverty among youth is their concentration in low wage and low skill jobs.

Poverty among youth has increased rapidly during the past decade. The number of poor between the ages of 18-24 has grown by 52%.

Youth from households with income below poverty are less likely to stay in school. The drop out rate among the poor is nearly twice as great as the average for all high school age youths. Lack of educational attainment further reduces the prospects of low income youth to move out of low wage and low skill jobs, creating a life-long pattern of low income and poverty.

## POVERTY STATUS OF PERSONS AGE 16 AND 17

| Poverty Level | Age 16 | Age 17 |
|---|---|---|
| Below 75% | 8.3% | 9.0% |
| 75-99% | 5.3 | 4.5 |

# ELDERLY

## ELDERLY

The elderly account for an increasing share of the state population, growing from 10.9% in 1960 to 11.7% in 1970, and reaching 12.5% by 1980, an increase of 36,500 people age 65 and over in twenty years. More than one family in five (22%) is now headed by a person at least 65 years of age.

The household structure and composition among the elderly varies substantially from the overall population. One third of the elderly are classified as unrelated individuals by the Census Bureau, compared to only 12% of the total population. Their number has increased by 36% since 1970, up 11,000 people. The poverty rate for unrelated individuals is nearly five times greater, 34% compared to 7% for persons in families. Unrelated individuals account for 71% of the elderly living below poverty in 1980. The poverty rate among families with elderly heads is only 7.9%.

An increasing portion of the elderly are women. In 1960, 54% of the population age 65 and over were women. In 1980, 60% were women. Among the elderly living below poverty, 71% are women.

The rate of poverty among the elderly is slightly higher than average (16% compared to 13%). However, the elderly are the only age group for which poverty has declined since 1970. The decline can be attributed to several factors, the indexing of social security benefits being most significant. Increased availability of part time employment opportunities for the elderly have enabled many still in good health to supplement their income. About one fourth of the elderly are in the labor force, the proportion declining as age increases. Half of the people age 60 and 64 work and 16% of those age 65 and over are in the labor force. Most do not work full time.

## ELDERLY POPULATION 1970 - 1980 BY POVERTY STATUS

| | 1970 | 1980 | Change |
|---|---|---|---|
| Total Elderly | 114,592 | 140,961 | + 23% |

## D.

## SINGLE PARENT FAMILIES

# SINGLE PARENT FAMILIES

Although there is a growing number of families headed by single males, the vast majority of single parent families are headed by women. The number of female headed households has tripled since 1970. One third are below poverty. They contain half of the State's children who live in poverty.

Single parent families are at a disadvantage because their earning capacity is limited to that of one earner. And, when that earner is a mother, often her past activities have been focused upon child rearing rather than upon career development. Thus, when faced with providing financially for the family, she must enter the labor force at an entry level position or accept temporary or part time work. Even good educational background does not compensate for lack of years of job experience.

Seventy five percent of women who are single parents are in the labor force, including 67% of those with children under age 6. But less than half have full time employment. Only 31% of the single women with preschool age children work full time and about half (48%) of the women with children of school age work full time.

Female headed households account for 14% of the families in urban areas, compared to only 8% of the families living in rural communities. However, female headed families in rural areas have a higher rate of poverty, 37% compared to 30% among urban families.

## POVERTY CHARACTERISTICS OF FEMALE HEADED HOUSEHOLDS IN MAINE, 1980

| | |
|---|---|
| Total Female Headed Households | 35,074 |
| Number Below Poverty | 10,790 |

## 5.1

## INCOME

# INCOME

The income of Maine households is low by national standards, averaging 80 to 85% of the national level. Family income in Maine ranked in 48th place in 1979. Thirty five percent of Maine households had incomes of less than $10,000.

Several factors account for the large portion of Maine people with relatively low income. The State has a high proportion of seasonal and part time employment. The labor force is concentrated in occupations generally associated with low wages. In households where more than one person is in the labor force, the income of the second and/or third worker is much less. And, a higher proportion of Maine residents are on fixed formula incomes.

Most people in Maine, 85% of the population age 16 and over, have some amount of income. Most have some earned income, although half are not fully employed.

Two thirds of the adult population is in the labor force and have earnings, the amount varying by source. Though they account for a small share of the population, farmers have the lowest earned income, averaging $3,865 per household in 1979 compared to $15,393 per household among wage and salary earners.

Sixty five percent of the population have unearned income. A quarter of the people have income from interest, dividends, and other sources but they account for a very small portion of Maine income. Few people, (5%) rely totally upon public assistance as a means of support although as many as 20% of the poor receive some amount of assistance. For the elderly, Social Security is the primary source of income. One fifth of the elderly have earnings as well but most work part time.

Few Maine people derive all of their income from a single source. People who have adequate jobs derive most of their income from wages and salaries. Pesons who do not work full time or who are self employed are more dependent upon supplemental sources.

Income varies greatly from one region of the state to another. In metropolitan areas income more closely resembles the national average while in rural areas income is much lower and more comparable to other rural distressed regions of the country.

The growth in income during the 1970's was also unevenly distributed. Some areas had great increases while other areas lagged further behind. The areas with least growth in income had the greatest increase in poverty. The most severe conditions are found in Waldo County today.

*Income Deficit is the difference between the total income of families and unrelated individuals below the poverty level and their respective poverty thresholds. It is a measure of the degree of impoverishment and an indicator of the amount of income that would be required to raise the family or individual's income to the poverty threshold.

## 5.2

## EMPLOYMENT

## UNEMPLOYMENT

## UNDEREMPLOYMENT

# EMPLOYMENT -- UNEMPLOYMENT -- UNDEREMPLOYMENT

## Employment and Labor Force Participation

Nearly three quarters of the adult population, or over 500,000 people, are in the labor force. The poor have much lower participation rates than average. Two thirds (66.1%) of the heads of low income families are in the labor force compared to 90% of the heads of families above poverty. Forty percent of the unrelated individuals living below poverty are in the labor force compared to two thirds overall. The low participation rate among unrelated individuals is accounted for by age and sex factors. A very large share of the unrelated individuals are elderly and most are women. Persons who are in the labor force have a much lower poverty rate. Those who are unemployed or underemployed are more likely to be poor.

## Unemployment

Unemployment effects a far greater number of people than is indicated by monthly unemployment rates. The overall unemployment rate in Maine has remained at or below the national average in recent years. In spite of a low average rate, one worker in five will be unemployed at some point during the year.

The average period of unemployment for Maine workers in 1979 was 15 weeks, suggesting that for many, immediate employment alternatives are not available and the employee must wait for an economic turn-around or the return of the season.

Unemployment is most severe among the young and the old. Nearly 30% of the people under age 25 in the labor force were unemployed for some time in 1979, a rate nearly three times greater than that of people at or near retirement. Conversely, however, the older worker who loses his/her job is unemployed three times as long.

## Underemployment

Underemployment effects a much larger sector of the labor force and is the largest single factor in the low income of Maine people. Half of the people who work are not employed full time (i.e., at least 35 hours a week and 50 weeks a year).

The difference in earnings between full and part time workers is dramatic. Two thirds of the people working less than full time earned under $5,000 in 1970 compared to only 5% of the fully employed workers. Eighty eight percent earned less than $10,000 compared to 38% of the population with a full time job.

The seasonality of many Maine occupations is the primary factor in underemployment, accounting for nearly 75% of the people who do not work full time.

## COMPARISON OF PERSONS WITH LABOR FORCE STATUS AND PERSONS WHO WORKED IN 1979* BY COUNTY

| County | Total Persons Age 16+ | Total in Civilian Labor Force Number | Total in Civilian Labor Force Percent | Total Who Worked in 1979 Number | Total Who Worked in 1979 Percent |
|---|---|---|---|---|---|
| Androscoggin | 74,316 | 46,618 | 62.7 | 51,948 | 69.9 |
| Aroostook | 66,350 | 35,522 | 53.5 | 44,461 | 67.0 |
| Cumberland | 166,101 | 101,729 | 61.2 | 116,183 | 69.9 |
| Franklin | 20,075 | 12,108 | 60.3 | 13,996 | 69.7 |
| Hancock | 32,240 | 17,286 | 53.6 | 21,506 | 66.7 |
| Kennebec | 82,580 | 50,388 | 61.0 | 56,325 | 68.2 |
| Knox | 25,344 | 13,833 | 54.6 | 16,235 | 64.1 |
| Lincoln | 19,463 | 10,687 | 54.9 | 12,266 | 63.0 |
| Oxford | 36,670 | 21,726 | 59.2 | 24,175 | 65.9 |
| Penobscot | 104,088 | 61,209 | 58.8 | 72,191 | 69.4 |
| Piscataquis | 13,099 | 7,477 | 57.1 | 8,412 | 64.2 |
| Sagadahoc | 21,213 | 12,025 | 56.7 | 14,671 | 69.2 |
| Somerset | 32,847 | 18,841 | 57.4 | 21,254 | 64.7 |
| Waldo | 20,788 | 11,564 | 55.6 | 13,465 | 64.8 |
| Washington | 26,152 | 13,270 | 50.7 | 15,996 | 61.2 |
| York | 104,403 | 63,118 | 60.5 | 72,038 | 69.0 |
| Maine | 845,729 | 497,401 | 58.8 | 575,122 | 68.0 |

*The number of persons who worked in 1979 is significantly greater than the total labor force. The total labor force figure represents fewer people because it is based upon whether a person is employed or looking for work during census week. Many seasonal workers and persons laid off are not counted as labor force participants since they are neither looking for work or at work but are waiting for the re-opening of the establishment for which they were working.

Source: 1970 and 1980 census.

NOTE: A slight overall decline in poverty is seen since 1970 due to a large drop in poverty among male headed households not in the labor force. This drop is due to indexing of social security benefits which reduced poverty rates among the elderly. Of the population in the labor force, poverty actually increased.

## UNEMPLOYMENT BY AGE AND SEX OF WORKER IN 1979

# 5.3

# ECONOMIC STRUCTURE AND ECONOMIC OPPORTUNITY

# EFFECT OF SOCIAL AND DEMOGRAPHIC FACTORS ON ECONOMIC OPPORTUNITY

The structure and availability of economic resources and services are key factors governing the extent of economic distress or economic opportunity. The Maine economy is characterized by relatively low wages and by a high rate of seasonal and part time employment. In addition, certain social and demographic factors serve as constraints. Differences in labor force participation and income are related to the age, sex, educational attainment, and disability status of the worker, and to the size, structure, and composition of the household in which he/she resides.

Persons in low wage or part time/seasonal jobs are more likely to be poor. Persons in these positions are more likely to be female, young or old, and to have a lower level of educational attainment. Families have higher rates of poverty when only one member is in the labor force, or when the income of the second earner is derived from a seasonal or temporary position in the service sector.

Labor force participation fluctuates with age of the worker. Participation is highest among younger women and rises again after age 45 as children reach school age or adulthood. For men, participation increases into mid-life and then declines.

Significant occupational differences exist between men and women and between people above and below poverty. Among the poor, over 40% of the men are employed in forest, fishing, farm or transportation occupations -- a rate four times greater than for men above poverty. One third of the women below poverty are employed in the service sector. Three quarters of the poor are employed in the trade and service or natural resource industries. Less than two thirds of those above poverty are employed in these two sectors.

The poverty rate is nearly four times as great among people who are not fully employed. Part time and seasonal jobs are concentrated in certain industries. Eighty five percent of the men who did not work a full year are employed in the trade and service (50%), natural resource (20%) or construction (15%) sectors. Of the women not working full time, 75% are employed in the trade and service sector. Administrative support jobs account for a large share of the part time work. These jobs are mostly held by non-poor married women. In contrast, service sector jobs are concentrated among the poor and especially among single women household heads.

Underemployment is related to age and education as well as to the sex of the worker. Thirty percent of the underemployed are not high school graduates, compared to 20% of the fully employed.

A steady rise in income is associated with the age of the worker. The median family income in 1979 increased from $11,641 for families in which the householder was under 25 to $17,450 by age 64.

The presence of more than one worker in the family increases household income even though the second worker often is employed less than full time and in a lower pay -- lower skill position than he/she is qualified for. The average income of families with two or more workers in over $6,000 greater than that of families with only one worker.

Among households headed by married couples, 5.4% are below poverty. This rate is reduced to 4.1% if the spouse works, even part time. 21% of the families in which the husband works full time are below 200% of the poverty level. The rate is reduced by half, to 11% if the wife also works full time.

There is significant regional variation in occupations and in the nature and availability of full and part time work. Rural areas have higher concentrations of natural resource sector employment. Administrative support positions, are concentrated in urban areas, and especially in southern Maine. Jobs in the service sector are widely distributed though the type of service varies regionally.

## LABOR FORCE PARTICIPATION IN 1980

## 6.

# Effects of Poverty

# 6.1

# HEALTH

# HEALTH

Poor health can limit the capacity to earn an adequate living and result in high medical expenses that reduce further the amount of income available to the household. Census data shows that persons with disability are twice as likely to be living below poverty. Children from low income families are three times more likely to die from accident or illness than children from non-poor households.

During the 1970's, major investments were made to serve people who previously were without adequate care because of cost and accessibility. Medicare, medicaid, catastrophic illness and medical needy programs have reduced the cost of care to thousands of low income people. The construction of rural health care facilities has brought services closer to the individual. Today the number of unserved or underserved people is small. However, needs do remain, especially among the working poor and in certain rural areas of the state where cost and distance are still prohibitive.

Lincoln County has the highest rate of deaths occurring at home and the lowest rate of deaths occurring in a hospital. The County's high proportion of elderly coupled with lack of a major medical facility are factors in where deaths occur. In 1980, 6.6% of the deaths in Waldo County occurred en route to the hospital, nearly three times the State average. Waldo County ranks second highest in number of deaths occurring at home and in least proportion occurring in the hospital and ranks lowest in the percent of deaths occurring in nursing homes. In contrast, 83% of the deaths in Cumberland County and 84% of the deaths in Kennebec County occur in a hospital or nursing home.

Although health care in Maine made major advancements in the 1970's, the death rate in Maine is twelvfth highest in the country. The State ranks in 33rd place in health care expenditures per capita and 32nd in the ratio of physicians to population. Maine needs an additional 400 doctors to meet the national average.

## 6.2

## HOUSING

## HOUSING

The Census of Housing provides three indicators of inadequate or substandard shelter: age of the housing stock, number of units lacking complete plumbing, and the degree of overcrowding.

Housing conditions show significant improvement since 1970. The number of units lacking complete plumbing has been reduced by half. The proportion of the State's housing stock built before 1940 has been reduced from two thirds to one half of the total stock as a result of new construction activity during the 1970's. Over 99,000 units were added during the decade. The actual number of pre-1940 housing units was decreased by 50,000, or by 20% in the 1970's. However, Maine remains ranked number one in the nation in the proportion of housing built before 1940.

Overcrowding (i.e., more than one person per room) has been reduced from 5.5% to 3.1% since 1970. In 1970 overcrowding was a problem in both rural and urban areas. The increase in multi-family and subsidized housing in urban areas has reduced the rate substantially while rural areas continue to have high rates of overcrowding.

Maine has a very low housing vacancy rate, averaging 7.7% statewide. Urban areas have lower rates than rural areas. Low vacancy rates tend to create a tight housing market, pushing costs up.

Maine ranks eighth in the proportion of the population who are homeowners. However, for the poor, the rate of home ownership is much lower. The proportion of people who live in rented units is over three times as high (42% compared to 14%) among the poor as among the population with income over 200% of the poverty level. Only half of the poor own their own homes compared to 85% of the population whose income is significantly above the poverty line.

Only 5% of the housing stock lacks complete plumbing today. The proportion of the poor that live in homes with incomplete plumbing is nearly six times as high as the rate for persons above 200% of poverty. Over 12% of the poor live in homes without a complete bathroom, compared to 2.6% of the population above 200% of the poverty line.

The proportion of rural homes lacking complete plumbing facilities is more than twice the proportion in urban communities and more than three and a half times as great as the rate in suburban areas. Over 15% of the rural housing stock lacks complete bathroom facilities. Rural communities account for 15% of the total housing stock in Maine but 36% of the units without complete plumbing are in rural communities.

TOTAL HOUSING UNITS IN 1970 = 397,200

| Built before 1940 | Built 1940-60 | Built 1960's |
|---|---|---|
| 255,800 | 72,700 | 68,700 |

## 6.3

## DEPENDENCY

## DEPENDENCY

Lack of sufficient income to provide for oneself and ones family requires many people to seek the aid of others or of public sources. On the average, one fifth of the Maine population receives benefits from a major income assistance program at any given time. The total number served throughout the year by such programs is much greater.

Dependence on public assistance has a profound effect on the individual and on his/her perception of self-worth and self-determination. Most people who are able to become self-reliant do so as soon as possible. However, lack of adequate jobs with adequate income is a major constraint.

Public assistance programs provide millions of dollars of aid annually. However, the actual benefit per person or per household is small and serves only to provide minimum necessities. The average monthly benefit per person provided by the AFDC program about $100. Benefits from the Food Stamp program averaged only $42 per person in 1983.

## LOCAL GENERAL ASSISTANCE* EXPENDITURES AND CASELOADS FOR SELECTED YEARS, 1978-1983

| Year | Number Assisted**<br>Cases | Persons | Total Expenditures |
|---|---|---|---|
| 1978 | 36,713 | 94,013 | $2,643,553 |
| 1979 | 35,567 | 86,845 | 2,726,290 |
| 1980 | 41,719 | 102,037 | 3,525,409 |
| 1983 | 51,442 | 111,599 | 6,546,099 |

---

* Information on General Assistance Expenditures is dependent upon municipal reporting. Many municipalities do not report unless eligible for State Assistance or they report sporadically. The totals in this table and following three tables covering the General Assistance Program include only the amounts reported and is not representative of the full participation and expenditure under the program.

** General Assistance is designed to assist people in sudden need for a short period of time. However, a segment of the recipients receive assistance on a repeated basis, thereby resulting in some duplication from month to month.

## 6.4

## OTHER PROBLEMS AND HUMAN NEEDS

# OTHER SOCIAL PROBLEMS AND HUMAN NEEDS

Many social problems have been linked either directly or indirectly to poverty or to conditions that are the basis for poverty. For example, such problems as child abuse, domestic violence, suicide, and crime have been demonstrated to increase or decrease in frequency and/or severity with fluctuations in the unemployment rate.

This chapter provides a limited amount of data for Maine. Because the data is incomplete, no attempt is made to suggest that there is an association between poverty and the events that are generally labeled "social problems" by the larger society.

## NUMBER OF SUICIDES BY COUNTY FOR SELECTED YEARS, 1970-77

| County | 1970 | 1975 | 1980 |
|---|---|---|---|
| Androscoggin | 13 | 7 | 15 |
| Aroostook | 11 | 9 | 8 |
| Cumberland | 25 | 26 | 29 |
| Franklin | 0 | 5 | 1 |
| Hancock | 0 | 2 | 2 |
| Kennebec | 14 | 12 | 15 |
| Knox | 3 | 4 | 3 |
| Lincoln | 6 | 2 | 4 |
| Oxford | 8 | 3 | 4 |
| Penobscot | 10 | 15 | 16 |
| Piscataquis | 3 | 3 | 5 |
| Sagadahoc | 3 | 4 | 7 |
| Somerset | 10 | 8 | 2 |
| Waldo | 2 | 5 | 4 |
| Washington | 4 | 7 | 4 |
| York | 18 | 16 | 21 |
| State | 133 | 128 | 140 |

NOTE: Maine has one of the highest rates of suicide in the nation. Northern counties have higher suicide rates than their more southern neighbors. Social scientists have attributed this phenomenon to climate, industrialization, and urbanization of society, and religious affiliation.

# Appendix

# APPENDIX 1

## COMPARISON OF U. S. CENSUS BUREAU AND STATE PLANNING OFFICE DEFINITIONS OF RURAL AND URBAN POPULATION

### Census Definition

The urban population includes persons living in a city, in the urbanized portion of an SMSA, or in a village or settlement which has a population of at least 100 persons per square mile and a total population of 2500 or more. The census has identified 57 urban places in Maine in 1980 and 53 urban places in 1970.

### State Planning Office Definition

The State Planning Office identifies three major types of communities: rural, suburban, and urban. Their classification is based on the relative position and function each community plays in its region. No minimum population or density thresholds are set. Some very small communities may be given urban classification because they serve as the central trade and service center to surrounding communities in their area, even though the extent of their urban character is of very small scale by national, or even by Maine standards.

# APPENDIX 2

## Definition of Census Data Terms

NOTE: The definitions given here have been summarized from the technical documentation. For further detail, refer to: Technical Documentation for Summary Tape File 3 Census of Population and Housing 1980.

Age: years of age on last birthday.

Bathroom: A complete bathroom contains a flush toilet, tub or shower and a wash basin with piped hot and cold water for the exclusive use of the occupants of the housing unit.

Class of Worker: determined by the type of ownership of the employing organization. Given for employed persons age 16 or over. Categories include:

1. Wage and Salary Workers: Persons who work for wage, salary, tips, commissions or payment in kind are hired by a private company, individual, non-profit agency.

2. Government Workers: Persons who work for any unit of government, including schools, public sewer, water or transportation districts and related entities.

3. Self-Employed Workers: Person who operates their own unincorporated business, trade, or farm.

4. Unpaid Family Workers: Persons who work without pay in their family's farm or business for at least 15 hours per week (based on work during the week prior to census taking).

Disability: Presence of a physical, mental, or other condition which has lasted for 6 or more months and which limits activity. Two categories are given:

1. Work Disability: Condition limits the amount of work or prevents working.

2. Limited or Transportation Disability: Condition makes it difficult or impossible to use public transportation.

Family: Two or more persons related by birth, marriage or adoption who live together as one household.

Sub-family: A married couple or single parent with child(ren) living in a housing unit and related to the householder.

Family Income: (In 1979) Total of all money received by members of the family age 15 and over.

Family Type: Three family types are used: married couple, female head only, or male head only.

Fuel: Type of fuel used to heat the home, for cooking and heating water. Types include: (1) utility gas, (2) bottled, tank, or LP gas, (3) electricity, (4) fuel oil, kerosene and related substances, (5) coal or coke, (6) wood, (7) other (includes solar), (8) no fuel used.

Group Quarters: Persons in group quarters are classified into residents of institutional and non-institutional quarters based on the type of group quarters. Institutionalized persons include those in mental hospitals, correctional institutions, homes for the aged and certain other treatment centers and homes. Other persons classified as living in group quarters include those in military barracks, college dormitories and rooming houses, and other special situations such as religious group quarters, homes for transients, missions, etc.

Heating Equipment: Type of heating system most often used. Categories include:

A. Central Heat:

(1) Steam or Hot Water, from central furnace

(2) Central Warm air, from central furnace

(3) Electric Heat Pump

(4) Other Built-in Electrical heating units

(5) Floor, Wall or Pipeless furnace units that deliver heat to rooms immediately above or beside the unit.

B. Lacking Central Heat:

(6) Room Heaters with Flue (non portable heaters connected to a flue, went or chimney) that burn gas, oil, kerosene or other liquid fuel.

(7) Room Heaters without Flue that burn gas, oil, kerosene or other liquid fuel.

(8) Fireplaces, Stoves, and Portable Heaters

(9) None

Hours Worked: Data available for 'last week' and for usual number hours worked per week in 1979. Categories include:

A. Last Week:

(1) At Work Full Time (worked 35 hours or more)

(2) At Work Part Time (worked 1 to 34 hours)

B. Per Week in 1979:

(1) Usually Worked Full Time (person age 16 or over worked 35 hours or more per week)

(2) Usually Worked Part Time (person age 16 or over usually worked 1 to 34 hours per week)

Household: All persons occupying a single housing unit.

Household Income: (In 1979) Total money received in 1979 by all household members age 15 or over

Household Relationship: Relationship of each member of the household to the householder. Categories include:

1. Householder: The person or one of the persons to in whose name the home is owned or rented.

2. Spouse: Husband or wife of the householder living with the householder.

3. Child: Son, daughter, step-child, or adopted child of the householder.

4. Other Relative: Includes parent, brother, sister, son or daughter-in-law, grandchild, nephew/niece, aunt/uncle, cousin, etc.

5. Non-Relative: Partner or roommate, boarder, foster child, paid employee or other non-relative.

Household Size: (See Persons)

Household Type: based on sex of householder and presence of relatives

Married couple, Male head only, Female head only
Non family (See Non-Family Household)

Housing Unit: A house, apartment, mobile home or trailer, group of rooms or single room occupied as a separate living quarter.

Income: (In 1979) Total money income received in the calendar year 1979, by persons ages 15 years old and over.

Total Income: the sum of the amounts reported separately from: (1) wages and salaries, (2) non farm self employment, (3) farm self employment, (4) interest, dividends and rentals, (5) social security, (6) public assistance, and (7) all other sources.

Median Income: based on the distribution of the total number of families, unrelated individuals, or persons, the value at which 50% of the cases is greater and 50% is lower. This figure is calculated by the Census Bureau from interval data.

Per Capita Income: the average income per person, derived by dividing the total income by the total population in a group.

(See Family and Household Income)

Income Type: source from which income was received (in 1979) by persons age 15 or over with income.

A. Earnings

1. Wage and Salary: income received for work performed as an employee. Includes wages, salary, commissions, tips, piecework, cash bonuses, and sick leave pay.

2. Non Farm Self Employment Income: net money income (gross receipts less operating expenses) received from an unincorporated business, professional enterprise or partnership.

3. Farm Income: net money income (gross receipts less operating expenses) received from operating a farm.

B. Income other than Earnings:

1. Social Security: receipts from social security pensions, survivors' benefits, and permanent disability payments.

2. Public Assistance: cash payments from AFDC and SSI.

3. All other Sources: includes veteran's payments, public and private pensions, annuities, insurance policies, worker's compensation, alimony, child support, etc.

Industry: the kind of business or activity in which the respondent was employed during the week prior to the census taking. Persons working at more than one job were classified according to the job at which they worked the most hours.

Kitchen Facilities: a complete kitchen facility contains a sink with piped water, range or cook stove (non portable) and a mechanical refrigerator. The equipment must be located in the same housing unit but need not be in the same room.

Labor Force Status: persons age 16 or over, data for current week and for previous years.

Current Week:

Employed: persons who are at work or who had a job but were not at work during the census week (due to illness, bad weather, vacation, or similar situations).

Unemployed: persons who are not at work who are available and looking for work.

Not in Labor Force: persons who are not at work and not looking for work. Includes students, retirees, disabled persons, spouses of workers, seasonal workers during the "off season", and persons doing incidental work (fewer than 15 hours).

Previous Year:

Worked in 1979: people who worked at any time during 1979 (even for a few days), were looking for work, or were laid off.

With Unemployment in 1979: persons who spent any amount of time in 1979 looking for work and without employment or on layoff.

Non-Family Household: persons who live alone or persons who share a dwelling unit but are not linked by relationship (marriage, relative or adoption).

Occupancy Status: (tenure): classification of all housing units as either occupied or vacant.

Occupation: the kind of work a person (age 16 or over) was doing at the job during the census week or at the most recent job (if not presently employed) if employed since 1975. Major categorical groups include:

1. Managerial and professional occupations
2. Technical, sales and administrative support (clerical)
3. Service occupation
4. Farming, forestry and fishing
5. Precision production, crafts and repair occupations
6. Operators, fabricators and laborer

Owner Costs: the sum of payments for cost of shelter for owner occupied units, including taxes, insurance, fuel and utilities and mortgage.

Persons in Household: total number of persons living in unit without regard to relationship.

Plumbing Facilities: complete plumbing facilities include piped water, flush toilet and a tub or shower for exclusive use by household members. All facilities need not be in the same room and hot water need not be available continuously.

Poverty Status: ratio of income of families and unrelated individuals to the poverty level as established by the Federal Government. The following categories are used:

A. Below Poverty:

1. Below 75% of poverty
2. Below 100% of poverty

B. Above Poverty:

1. 100-125% of poverty level
2. 125-149% of poverty level
3. 150-174% of poverty level
4. 175-199% of poverty level
5. 200% or above of poverty level

Rent:

Contract Rent: the amount of monthly rent paid to the owner of the dwelling.

Gross Rent: the contract rent plus the estimated monthly cost of utilities (water, electricity, gas, fuel for heat, etc.) that are not included in the contract rent and are paid by the tenant in addition to the contract rent.

Rooms: the number of whole rooms intended for living purposes (does not include bathrooms, halls, porches, unfinished attics, and basements, utility roms, etc)

School Level: year of school in which all person age 3 and over are enrolled. Data is classified as (1) nursery school, (2) Kindergarden, (3) Elementary, (4) High School, and (5) College.

School Years Completed: highest grade of school completed by persons age 25 and over.

Sub-Family: (See Family)

Tenure: (See Occupancy Status)

Transportation: principal means of travel to work.

Unrelated Individual: a person living alone or with persons not related (roomer, boarder, roommate, employee, etc.).

Unemployment: (weeks in 1979): number of weeks during 1979 in which a person did not work but was looking for work or was laid off.

Value: for owner occupied housing, the owner's estimate of the current dollar worth of the property.

Weeks Worked in 1979: the number of weeks in 1979 in which a person worked (including vacation and paid sick leave).

Year Last Worked: the most recent year in which a person did any work for pay or profit or worked without pay for a family business or farm.

Year Round Housing Unit: all occupied and vacant units intended for year round use.

Year Structure Built: the year the original construction of the building was complete (not of later remodeling).

# DATA APPENDIX I

## SELECTED SOCIAL AND ECONOMIC CHARACTERISTICS OF THE MAINE POPULATION

## BY TOWN, COUNTY AND EXTENDED COMMUNITY AND COMMUNITY TYPE

SOURCE: Compiled from 1980 Census Summary Tape #3

# INTRODUCTION

The Tables contained in this appendix are prepared in two parts. The first presents data for each town & county in the State. The second presents the same data for each of Maine's 37 extended communities & each major type (Rural, Suburban, and Urban) of community.

The extended communities & the classification of communities by type were developed by the State Planning Office in 1980. The concept of "extended community" is a method for grouping municipalities into logical socio-economic units. An extended community is defined as that geographic area in which people carry out their normal day to day functions -- working, shopping, entertaining, living, etc. The extended community is therefore comprised of several types of communities (minor civil divisions or municipalities) and includes trade and employment centers, suburban or residential communities, and rural and primary industry towns. Thirty seven extended communities are delineated. (see map) Extended communities are useful areas for planning and service delivery since most people within the area derive all of their basic needs from the area.

The individual municipalities within each extended community are grouped into three commonly recognized categories -- rural, suburban, and urban -- based upon their relative role and position in the extended community.

The tables in this appendix have been prepared from 1980 Census Summary Tapes. Questions or inquiries regarding the data should be directed to Joyce Benson, Senior Planner, Maine State Planning Office.

## Table 2

## POVERTY STATUS OF MAINE HOUSEHOLDS: DATA FOR FAMILIES AND NON FAMILY HOUSEHOLDS

Note: Families and Non-Family households = total households

Data = Number of Households

| Column | Heading | Data Presented |
|---|---|---|
| 1 | FBELPOV | Number of Families Below poverty |
| 2 | F100-25 | Number of Families With Income 100-124% of Poverty |
| 3 | FGT125 | Number of Families With Income 125% of Poverty Line or Above |
| 4 | FTOTAL | Total Number of Families |
| 5 | NBELPOV | Number of Non Family Households Below Poverty |
| 6 | N100-25 | Number of Non Family Households With Income 100-124% of Poverty |
| 7 | NGT125 | Number of Non Family Households With Income 125% of Poverty or Above |
| 8 | NTOTAL | Total Number of Non Family Households |
| 9 | HBELPOV | Total Number of Households Below Poverty |
| 10 | H100-25 | Total Number of Households With Income 100-124% of Poverty |
| 11 | HGT125 | Total Number of Households With Income 125% of Poverty or Above |
| 12 | HTOTAL | Total Number of Households of All Income Levels |

## POVERTY STATUS OF MAINE HOUSEHOLDS: DATA FOR FAMILIES AND NONFAMILY HOUSEHOLDS

(Family and nonfamily households = Total Households)

Data = Percent of Households

| Column | Heading | Data Presented |
|---|---|---|
| 1 | FPCTBEL | % of families below poverty level |
| 2 | FPCLT125 | % families between 100% and 125% of poverty level |
| 3 | FBEL125 | % of families under 125% of poverty level |
| 4 | FPCGT125 | % of families over 125% of poverty level |
| 5 | NPCTBEL | % of nonfamily households below poverty level |
| 6 | NPCLT125 | % nonfamily hseholds between 100% & 125% povty lev |
| 7 | NBEL125 | % nonfamily households under 125% of poverty level |
| 8 | NPCGT125 | % nonfamily households over 125% of poverty level |
| 9 | HPCTBEL | % of households below poverty level |
| 10 | HPCLT125 | % hseholds between 100% and 125% of poverty level |
| 11 | HBEL125 | % of households under 125% of poverty level |
| 12 | HPCGT125 | % of households over 125% of poverty level |

Table 9

## LABOR FORCE PARTICIPATION* IN 1979 BY SEX OF WORKER

| Column | Heading | Data Presented |
|---|---|---|
| 1 | MEN | Total Number of Men Age 16 and Over |
| 2 | MLF | Total Number In the Labor Force |
| 3 | MWTHU | Number In Labor Force Who Had Some Unemployment |
| 4 | MPCTU | Percent In Labor Force Who Had Some Unemployment |
| 5 | MPCTLF | Percent of Male Population Age 16 and Over In the Labor Force |
| 6 | WOMEN | Total Number of Women Age 16 and Over |
| 7 | FLF | Total Number In the Labor Force |
| 8 | FWTHU | Number In Labor Force Who Had Some Unemployment in 1979 |
| 9 | FPCTU | Percent In Labor Force Who Had Some Unemployment in 1979 |
| 10 | FPCTLF | Percent of Female Population Age 16 and over In the Labor Force |

* data for persons age 16 and over

## SOURCE OF INCOME OF MAINE HOUSEHOLDS IN 1979

Note: many households have income from more than one source; percentages add up to more than 100% because of multiple sources

| Column | Heading | Data Presented |
|---|---|---|
| 1 | HSDS | Total Number of Households |
| 2 | EARN | Number of Households With Earnings |
| 3 | PCTEARN | Percent of Households With Earnings |
| 4 | WGSAL | Number of Households With Income From Wage or Salary |
| 5 | PCTWGSAL | Percent of Households With Income From Wage or Salary |
| 6 | SELF | Number of Households With Income From Self Employment |
| 7 | PCTSELF | Percent of Households With Income From Self Employment |
| 8 | FARM | Number of Households With Farm Income |
| 9 | PCTFARM | Percent of Households With Farm Income |

|  |  |  |
|---|---|---|
| 10 | IDR | Number of Households With Interest Dividends or Rental Income |
| 11 | PCTIDR | Percent of Households With Interest Dividents or Rental Income |
| 12 | SS | Number of Households With Social Security Income |
| 13 | PCTSS | Percent of Households With Social Security Income |
| 14 | PA | Number of Households With Public Assistance Income |
| 15 | PCTPA | Percent of Households With Public Assistance Income |

# DATA APPENDIX II

# DETAILED HOUSING CHARACTERISTICS

## BY TOWN, COUNTY, EXTENDED COMMUNITY AND COMMUNITY TYPE

Source: Compiled from 1980 Census Summary Tape #3

# INTRODUCTION

The Tables contained in this appendix are prepared in two parts. The first presents data for each town & county in the State. The second presents the same data for each of Maine's 37 extended communities & each major type (Rural, Suburban, and Urban) of community.

The extended communities & the classification of communities by type were developed by the State Planning Office in 1980. The concept of "extended community" is a method for grouping municipalities into logical socio-economic units. An extended community is defined as that geographic area in which people carry out their normal day to day functions -- working, shopping, entertaining, living, etc. The extended community is therefore comprised of several types of communities (minor civil divisions or municipalities) and includes trade and employment centers, suburban or residential communities, and rural and primary industry towns. Thirty seven extended communities are delineated. (see map) Extended communities are useful areas for planning and service delivery since most people within the area derive all of their basic needs from the area.

The individual municipalities within each extended community are grouped into three commonly recognized categories -- rural, suburban, and urban -- based upon their relative role and position in the extended community.

The tables in this appendix have been prepared from 1980 Census Summary Tapes. Questions or inquiries regarding the data should be directed to Joyce Benson, Senior Planner, Maine State Planning Office.

## Table 10

## AGE OF MAINE HOUSING STOCK: NUMBER AND PERCENT OF UNITS BY YEAR BUILT

| Column | Heading | Data Description |
|---|---|---|
| 1 | TOT | Total Housing Units |
| 2 | T79-80 | Number Built in 1979 to 1980 |
| 3 | T75-78 | Number Built in 1975 to 1978 |
| 4 | T70-74 | Number Built in 1970 to 1974 |
| 5 | T60-69 | Number Built in 1960 to 1969 |
| 6 | T50-59 | Number Built in 1950 to 1959 |
| 7 | T40-49 | Number Built in 1940 to 1949 |
| 8 | T1939 | Number Built Before 1940 |
| 9 | PCT1 | Percent Built in 1979 to 1980 |
| 10 | PCT2 | Percent Built in 1975 to 1978 |
| 11 | PCT3 | Percent Built in 1970 to 1974 |
| 12 | PCT4 | Percent Built in 1960 to 1969 |
| 13 | PCT5 | Percent Built in 1950 to 1959 |
| 14 | PCT6 | Percent Built in 1940 to 1949 |
| 15 | PCT7 | Percent Built Before 1940 |

## GROSS RENT AS A PERCENT OF HOUSEHOLD INCOME

| Column | Heading | Data Description |
|---|---|---|
| | | A. Households with income under $5,000: |
| 1 | A1 | Spend less than 20% for shelter |
| 2 | A2 | Spend 20-24% for shelter |
| 3 | A3 | Spend 25-34% for shelter |
| 4 | A4 | Spend 35% or more for shelter |
| 5 | A5 | Not Computed |
| 6 | TOTAL A | Total with income under $5,000 |
| | | B. Households with income $5,000-9,999: |
| 7 | B1 | Spend less than 20% for shelter |
| 8 | B2 | Spend 20-24% for shelter |
| 9 | B3 | Spend 25-34% for shelter |
| 10 | B4 | Spend 35% or more for shelter |
| 11 | B5 | Not Computed |
| 12 | TOTAL B | Total with income $5,000-9,999 |

| | | |
|---|---|---|
| | | C. Households with income $10,000-14,499: |
| 13 | C1 | Spend less than 20% for shelter |
| 14 | C2 | Spend 20-24% for shelter |
| 15 | C3 | Spend 25-34% for shelter |
| 16 | C4 | Spend 35% or more for shelter |
| 17 | C5 | Not Computed |
| 18 | TOTAL C | Total with income $10,000-14,999 |
| | | D. Households with income $15,000-19,999: |
| 19 | D1 | Spend less than 20% for shelter |
| 20 | D2 | Spend 20-24% for shelter |
| 21 | D3 | Spend 25-34% for shelter |
| 22 | D4 | Spend 35% or more for shelter |
| 23 | D5 | Not Computed |
| 24 | TOTAL D | Total with income $15,000-19,999 |
| | | E. Households with income $20,000 or more: |
| 25 | E1 | Spend less than 20% for shelter |
| 26 | E2 | Spend 20-24% for shelter |
| 27 | E3 | Spend 25-34% for shelter |
| 28 | E4 | Spend 35% or more for shelter |
| 29 | E5 | Not Computed |
| 30 | TOTAL E | Total with income $20,000 or more |

## Table 12

## GROSS SHELTER COST AS A PERCENT OF HOUSEHOLD INCOME OF HOME OWNERS

| Column | Heading | Data Description |
|---|---|---|
| | | Households with income under $5,000: |
| 1 | F1 | Spend less than 20% for shelter |
| 2 | F2 | Spend 20-24% for shelter |
| 3 | F3 | Spend 25-34% for shelter |
| 4 | F4 | Spend 35% or more for shelter |
| 5 | F5 | Not Computed |
| 6 | TOTAL F | Total with income under $5,000 |
| | | Households with income $5,000-9,999: |
| 7 | G1 | Spend less than 20% for shelter |
| 8 | G2 | Spend 20-24% for shelter |
| 9 | G3 | Spend 25-34% for shelter |
| 10 | G4 | Spend 35% or more for shelter |
| 11 | G5 | Not Computed |
| 12 | TOTAL G | Total with income $5,000-9,999 |

|  |  |  |
|---|---|---|
|  |  | Households with income $10,000-14,499: |
| 13 | H1 | Spend less than 20% for shelter |
| 14 | H2 | Spend 20-24% for shelter |
| 15 | H3 | Spend 25-34% for shelter |
| 16 | H4 | Spend 35% or more for shelter |
| 17 | H5 | Not Computed |
| 18 | TOTAL H | Total with income $10,000-14,999 |
|  |  | Households with income $15,000-19,999: |
| 19 | I1 | Spend less than 20% for shelter |
| 20 | I2 | Spend 20-24% for shelter |
| 21 | I3 | Spend 25-34% for shelter |
| 22 | I4 | Spend 35% or more for shelter |
| 23 | I5 | Not Computed |
| 24 | TOTAL I | Total with income $15,000-19,999 |
|  |  | Households with income $20,000 or more: |
| 25 | J1 | Spend less than 20% for shelter |
| 26 | J2 | Spend 20-24% for shelter |
| 27 | J3 | Spend 25-34% for shelter |
| 28 | J4 | Spend 35% or more for shelter |
| 29 | J5 | Not Computed |
| 30 | TOTAL J | Total with income $20,000 or more |

NOTE: Due to the length of this table, data has not been included for extended communities and type of community. For comparable information, contact the State Planning Office, Sta. #38, Augusta, Me. 04333 (tel. 289-3261). Attn. Joyce Benson

# HOUSING CONDITIONS AND POVERTY

## SPECIAL CROSS TABULATION FROM THE PUBLIC USE MICRODATA FILE

The U. S. Census Bureau does not tabulate data on housing conditions according to the poverty status of the occupants.

The tables presented in this section are compiled from a census tape representing a 5% sample of the State population. The cross tabulations allow us to determine the extent to which poverty and poor housing conditions are related.

The following tables focus on people and the conditions of the housing in which they live. The data is not a count of housing units. For example, in 1980, half (50%) of the housing units in Maine were built before 1940 but only 45% of the population was living in them. The data also shows that 12.3% of the people below poverty live in units lacking complete plumbing. By comparison, 6.6% of the population with income between 100-199% of poverty and only 2.6% of those with incomes of 200% or more above the poverty level live in homes with incomplete plumbing facilities.
